

## **SUMMARY OF PROPOSED LEGISLATION**

Tracking No. 0149-24

DATE: July 2, 2024

RE: AN ACT RELATING TO THE LAW AND ORDER COMMITTEE, THE HEALTH, EDUCATION, AND HUMAN SERVICES COMMITTEE, THE RESOURCES AND DEVELOPMENT COMMITTEE, THE BUDGET AND FINANCE COMMITTEE, AND THE NAABIK'YATI' COMMITTEE, AND THE NAVAJO NATION COUNCIL; ESTABLISHING THE "NAVAJO NATION ENVIRONMENTAL REMEDIATION FUND" AND APPROVING A 2% ANNUAL SET-ASIDE FROM THE GENERAL FUND TO PAY FOR REMEDIATION ACTIVITIES AT CONTAMINATED SITES LOCATED ON THE NAVAJO NATION

### **PURPOSE OF THIS LEGISLATION:**

to establish a new Fund to pay for environmental remediation at sites across the Navajo Nation, with an annual 2% set-aside from the General Fund.

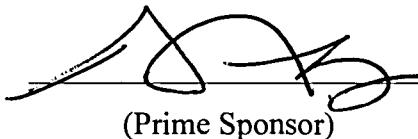

### **FINAL AUTHORITY and VOTE REQUIREMENT:**

The Navajo Nation Council has final authority. A simple majority vote is required.

1 PROPOSED NAVAJO NATION COUNCIL RESOLUTION  
2 25th NAVAJO NATION COUNCIL - Second Year, 2024  
3 Introduced by:

(Prime Sponsor)

8 Tracking No. 0149-24

10 AN ACT

11 RELATING TO THE LAW AND ORDER COMMITTEE, THE HEALTH,  
12 EDUCATION, AND HUMAN SERVICES COMMITTEE, THE RESOURCES  
13 AND DEVELOPMENT COMMITTEE, THE BUDGET AND FINANCE  
14 COMMITTEE, AND THE NAABIK'YATI' COMMITTEE, AND THE  
15 NAVAJO NATION COUNCIL; ESTABLISHING THE "NAVAJO NATION  
16 ENVIRONMENTAL REMEDIATION FUND" AND APPROVING A 2% ANNUAL  
17 SET-ASIDE FROM THE GENERAL FUND TO PAY FOR REMEDIATION  
18 ACTIVITIES AT CONTAMINATED SITES LOCATED ON THE NAVAJO NATION

19  
20 SECTION ONE. AUTHORITY

- 21 A. The Law and Order Committee is a standing committee of the Navajo Nation Council with  
22 legislative authority to review and make recommendations to the Council as to proposed new  
23 enactments under the Navajo Nation Code. 2 N.N.C. §601(B)(14).
- 24 B. The Health, Education, and Human Services Committee is a standing committee of the  
25 Navajo Nation Council with legislative authority over matters involving environmental  
26 health. 2 N.N.C. §401(B)(6)(a).
- 27 C. The Resources and Development Committee was established as a standing committee of the  
28 Navajo Nation Council with authority over matters involving the natural environment,  
29 including water, land, and environmental protection. 2 N.N.C. §500(C).
- 30 D. The Resources and Development Committee has oversight authority over the Navajo Nation

- 1       Division of Natural Resources and its subordinate departments, including the Navajo  
2       Environmental Protection Agency (“NEPA”). 2 N.N.C. §501(C)(1).
- 3       E. The Budget and Finance Committee is a standing committee of the Navajo Nation Council  
4       authorized to review and recommend to the Council the management of all funds. 2 N.N.C.  
5       §164(A)(9); 2 N.N.C. §300(A); 2 N.N.C. §301(B)(2).
- 6       F. The Navajo Nation established the Naabik’iyáti’ Committee as a Navajo Nation Council  
7       standing committee, and all proposed legislation that requires final action by the Navajo  
8       Nation Council is assigned to the Naabik’iyáti’ Committee for its review and consideration.  
9       2 N.N.C. §164(A)(9); 2 N.N.C. §700(A).
- 10      G. The Navajo Nation Council is the governing body of the Navajo Nation. 2 N.N.C. §102(A).  
11       As such, the Council has the authority to establish new funds for specific purposes that  
12       benefit the public’s general health, safety, and welfare.

13

## 14 SECTION TWO. FINDINGS

- 15      A. In Resolution No. CF-07-08 the Navajo Nation Council established the Hazardous  
16       Substances Fund. See 4 N.N.C. §2701(A). Pursuant to Budget and Finance Committee  
17       Resolution No. BFJA-09-11, the Fund Management Plan for the Hazardous Substances Fund  
18       was approved.
- 19      B. Similar to the Hazardous Substances Fund, there is an urgent need to create an  
20       “Environmental Remediation Fund” (and a related Fund Management Plan), which Fund  
21       should be designated specifically for environmental assessment, cleanup, and remediation at  
22       former industrial sites located across the Navajo Nation. These contaminated sites present a  
23       significant danger to the public health and well-being, livestock and water supplies, as well  
24       as long-term harms to the natural environment.
- 25      C. Two major examples of the many contaminated sites are Red Lake and Sawmill. The NEPA  
26       has prepared a Fact Sheet explaining the contamination of the two former industrial sites  
27       located in Red Lake and Sawmill Chapters. Total cleanup and environmental remediation is  
28       expected to cost more than \$500,000,000 and last many years. **EXHIBIT 1**.
- 29      D. The U.S. EPA has provided an assessment report for the Sawmill site. **EXHIBIT 2**.
- 30      E. In addition to the Red Lake and Sawmill sites, there is extensive surface and groundwater

1 contamination at several other former business and industrial sites across the Navajo Nation,  
2 which sites urgently need assessment and remediation for the protection of the public health,  
3 that of livestock, and that of sacred plants, herbs, and the natural environment. **EXHIBIT 3.**

4 F. The NEPA has prepared a project Ranking Sheet for the ranking of those projects that should  
5 be prioritized. **EXHIBIT 4.**

6 G. The Navajo Nation finds that, rather than approving piecemeal funding for cleanup projects,  
7 establishing the new “Navajo Nation Environmental Remediation Fund” with an annual  
8 automatic set-aside of 2% of the General Fund, is in the best interest of the Navajo Nation  
9 and the Navajo People. Such Fund will provide an ongoing source of funding for extensive  
10 and long-term remediation projects, and shows the Navajo Nation’s firm commitment to  
11 protecting and preserving the natural environment for the long-term health and well-being of  
12 the Navajo People.

13

14 **SECTION THREE. ESTABLISHING THE “NAVAJO NATION ENVIRONMENTAL**  
15 **REMEDIATION FUND” AND APPROVING A 2% ANNUAL**  
16 **SET-ASIDE FROM THE GENERAL FUND TO PAY FOR**  
17 **REMEDIATION ACTIVITIES AT CONTAMINATED SITES**  
18 **LOCATED ON THE NAVAJO NATION**

19 The Navajo Nation hereby establishes the “Navajo Nation Environmental Remediation Fund”  
20 as follows:

21 \* \* \* \*

22 **NAVAJO NATION CODE ANNOTATED**

23 **TITLE 4. ENVIRONMENT**

24 **CHAPTER 18. NAVAJO NATION ENVIRONMENTAL REMEDIATION FUND**

26 **§2901. Establishment; purposes.**

27 There is hereby established a Navajo Nation financial account titled: “Navajo Nation  
28 Environmental Remediation Fund” (hereinafter referred to as “Fund”). The purpose  
29 of this Fund is to pay for the activities of the Navajo Environmental Protection  
30 Agency (“NEPA”), or NEPA’s contractors or agents, related to the assessment,

1       cleanup, and remediation of former business and industrial sites located on the  
2       Navajo Nation that are contaminated with dangerous chemicals, materials, or  
3       substances, and that pose a danger to human health, public welfare, livestock, crops,  
4       groundwater, and the natural environment.

5

6       **§2902. Source of money for the Fund.**

7       This Fund shall consist of an annual allocation in the Navajo Nation's annual  
8       comprehensive budget legislation, of two-percent (2%) of the General Fund. This  
9       annual allocation shall be automatic and shall not require action of the Navajo Nation  
10      Council. Money received by the Navajo Nation from federal, state, or private grants  
11      or donations, may also be deposited into this Fund if such money is designated for  
12      any purpose related to environmental assessment, cleanup, or remediation.

13

14      **§2903. Fund Management Plan.**

15      All allocations and expenditures of money from this Fund shall be in accordance with  
16      a Fund Management Plan approved by the Budget and Finance Committee. The Fund  
17      Management Plan shall not permit any other entity to receive allocations from this  
18      Fund for any purpose; this Fund is solely for use strictly by the NEPA for the purposes  
19      described in Section 2901.

20

21      **§2904. NEPA administration; reporting.**

22      The NEPA shall administer this Fund and the NEPA Director shall report annually  
23      to the Navajo Nation Council on the sums deposited into the Fund, including the  
24      sources and uses thereof, and the use of any agents or contractors for assessment,  
25      cleanup, and/or remediation activities.

26

27      **§2905. No reversion.**

28      Any money remaining in the Fund at the end of each fiscal year shall not revert to the  
29      General Fund but shall remain available for use by NEPA as provided in the approved  
30      Fund Management Plan.

1           **§2906. Restrictions.**

2       No money from this Fund shall be used for assessment, cleanup, or remediation of  
3       any facility owned by the federal government or its instrumentalities, or by any state  
4       government or its instrumentalities. Notwithstanding, nothing in this Paragraph shall  
5       prevent the NEPA from taking immediate corrective action at a facility where there  
6       is no solvent owner or operator or where immediate action is necessary to respond to  
7       an imminent and substantial threat to human health, livestock, groundwater, or the  
8       environment even if it is owned by the federal or state government. In such cases, the  
9       Navajo Superfund has the ability to cost recover.

10      \* \* \* \*

11           **SECTION FOUR. DIRECTIVES**

- 12      A. Promptly upon the effective date of this Act, the Office of the Controller shall set up the new  
13       Environmental Remediation Fund financial account for the Navajo Nation, in accordance  
14       with normal bookkeeping procedures, and the annual 2% set-aside shall be included in the  
15       FY2025 Comprehensive Budget, and in every annual Comprehensive Budget thereafter so  
16       long as the Fund exists.
- 17      B. The Navajo Nation Council hereby directs the NEPA to prepare and present a Fund  
18       Management Plan to the Budget and Finance Committee, for the Committee's approval no  
19       later than December 31, 2024.
- 20      C. The Fund Management Plan shall include a provision allowing NEPA to receive funds upon  
21       approval of the Resources & Development Committee, and providing for budget transfers of  
22       funds already provided to NEPA to be approved by the Resources & Development  
23       Committee.
- 24      D. No funds shall be available for expenditure by NEPA until the Fund Management Plan is  
25       approved by the Budget and Finance Committee after recommendation by the Resources and  
26       Development Committee.

27           **SECTION FIVE. EFFECTIVE DATE**

28      This Action shall become effective as provided in 2 N.N.C. §221(B), 2 N.N.C. §1005(C)(10),

1 and 2 N.N.C. §164(A)(17).

3 **SECTION SIX. SAVING CLAUSE**

4 If any portion of this Action is determined invalid by the Navajo Nation Supreme Court, or by  
5 a District Court of the Navajo Nation without appeal to the Navajo Nation Supreme Court, the  
6 remainder of this Action shall be the law of the Navajo Nation.

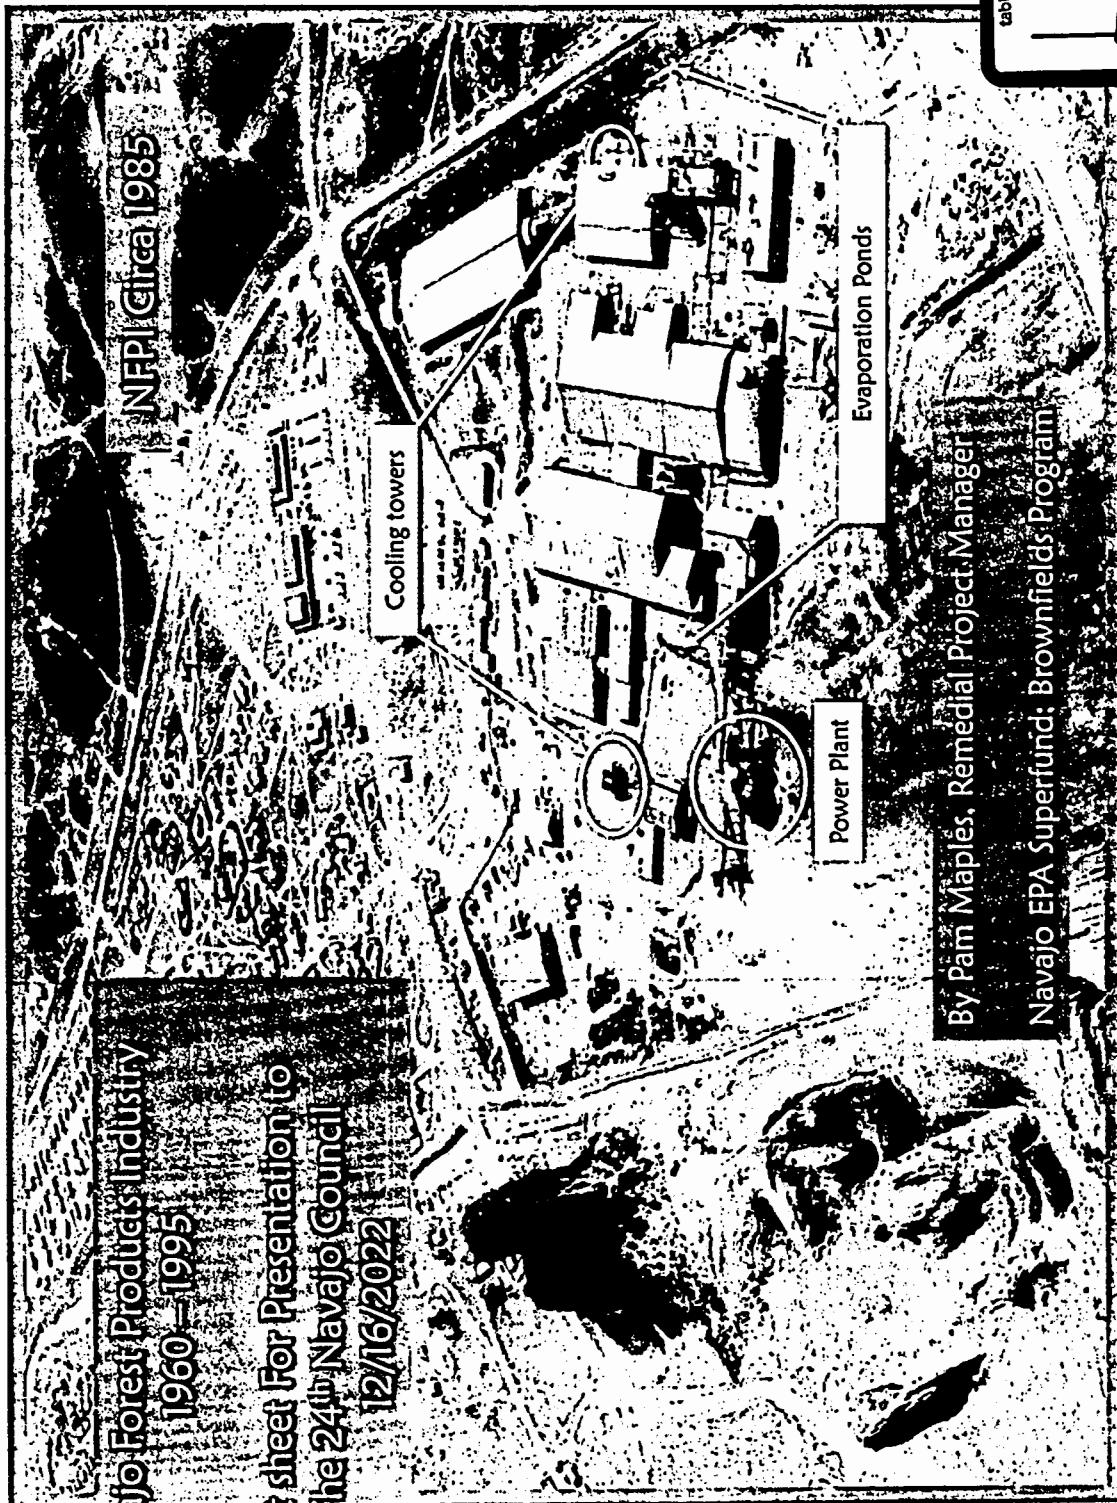

7 **SECTION SEVEN. CODIFICATION**

8 The provisions of this Act which amend or adopt new sections of the Navajo Nation Code shall  
9 be codified by the Office of Legislative Counsel. The Office of Legislative Counsel shall  
10 incorporate such amended provisions in the next codification of the Navajo Nation Code.

1960 - 1995**

**Fact sheet For Presentation to  
The 24<sup>th</sup> Navajo Council  
12/16/2022**

**NFPI (ca 1985)**

By Pam Maples, Remedial Project Manager

Navajo EPA Superfund: Brownfields Program

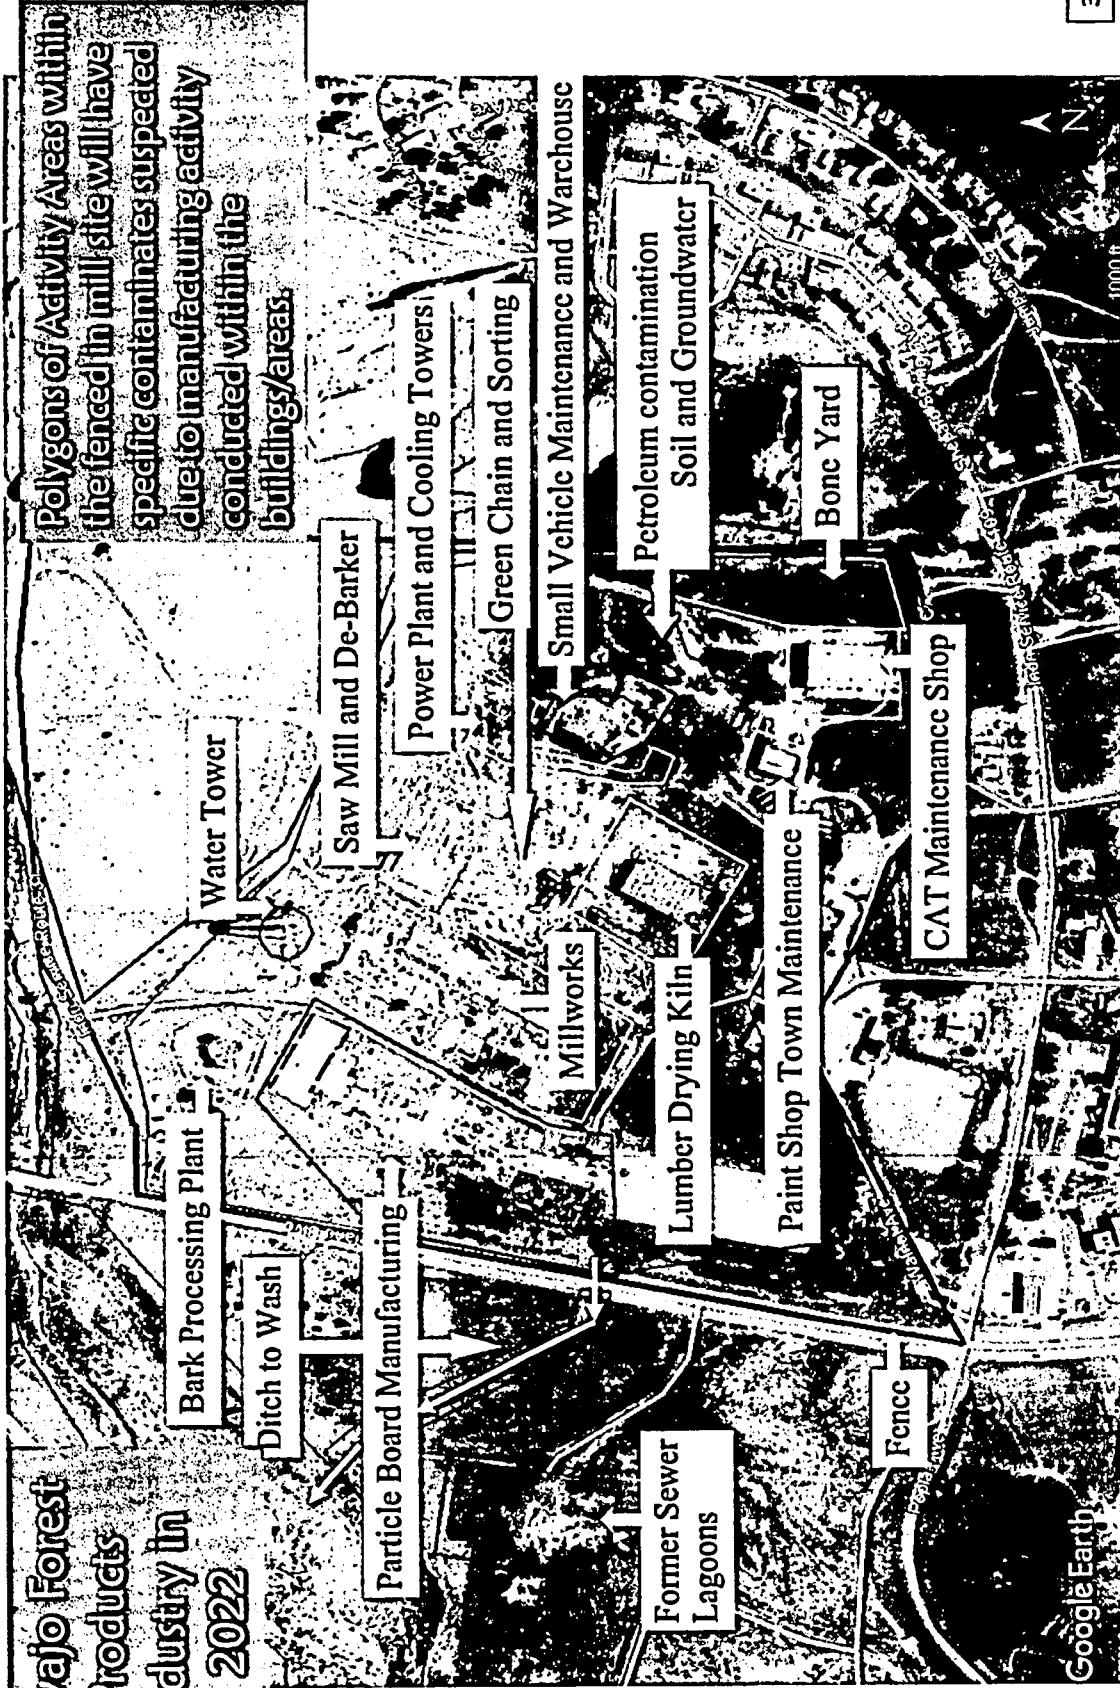

## Overview:

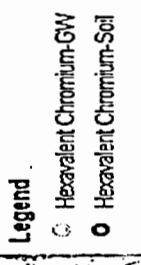

The Navajo Forest Products Industries (NFPI) sawmill and particle board manufacturing facility:

- The first wholly Navajo-owned tribal enterprise.
- It was originally built in 1939 and located in Sawmill, AZ.
- It was expanded and moved to Navajo, NM in 1960.
- It represented hope for a brighter future and an opportunity for the Navajo Nation to be economically self-sustaining.
- The NFPI site has been closed for 25 years with nothing done to mitigate the extensive contamination left by operations at the site.
- Plans are now being formulated to clean-up both sites where the Tribal Enterprise once stood. It needs assessment and cleanup to protect human health and the environment.
- As the work is completed at NFPI, the land can be reused in a way that provides jobs and supports the community of Navajo and Red Lake Chapter.
- It is a chance for rebirth of the dream the people had about this community as a place that they can again all be proud to call their home.

# Navajo Forest Products Industry in 2022

Polygons of Activity Areas within the fenced in mill site will have specific contaminates suspected due to manufacturing activity conducted within the buildings/areas.

Chromium, Lead, Mercury, Selenium Benzene, Naphthalene, and Toluene and various other solvents in soil at high levels at differing depths: surface to 25 feet depth.

Formaldehyde  
strongly suspected  
Needs immediate  
investigation

Chloroform coming up  
as Soil Gas

Hexavalent chromium  
in soil

Diesel, Lead, and Chromium in soil  
and groundwater

Hexavalent chromium  
in soil  
and groundwater

Diesel and Gasoline  
in soil and  
groundwater

Groundwater Flow Direction

**Notes, NFPI, Navajo, NM:**

1. NFPI operated for 8 years before there was a National Environmental Protection Agency and 10 years before the establishment of the Navajo Nation Environmental Protection Commission.
2. However, due to their standard operating procedures NFPI has always been in violation of The Federal Water Pollution Control Act of 1948.
3. Since 1972, the facility has had multiple unpermitted Discharges and Violations of The Clean Water Act.
4. NTUA had sludge management issues in their sewer lagoons due to the waste water from NFPI containing chemicals to precipitate impurities out of boiler water being discharged through ditches into the lagoons. The lagoons were accumulating sludge rapidly.
  - Where did they put the dredged sludge when they removed it?
  - Sampling will be needed in that location also.
5. Environmental problems arise when water escapes from a boiler system into the environment from unlined cooling/evaporation ponds, in the form of droplets from the cooling towers, from leaking boiler piping, and/or the connecting pipes between power generation plants and cooling towers.
6. During discussions between NFPI and NTUA about the non-functionality of the wastewater lagoons, NFPI admitted that they discharged into the NTUA sewer lagoons but NOT in to Black Creek.
7. Later, USEPA field inspection staff observed discharge from the leaking underground pipe from the power plant/cooling towers being discharged into Black Creek.

## NFPI Surface Drainages

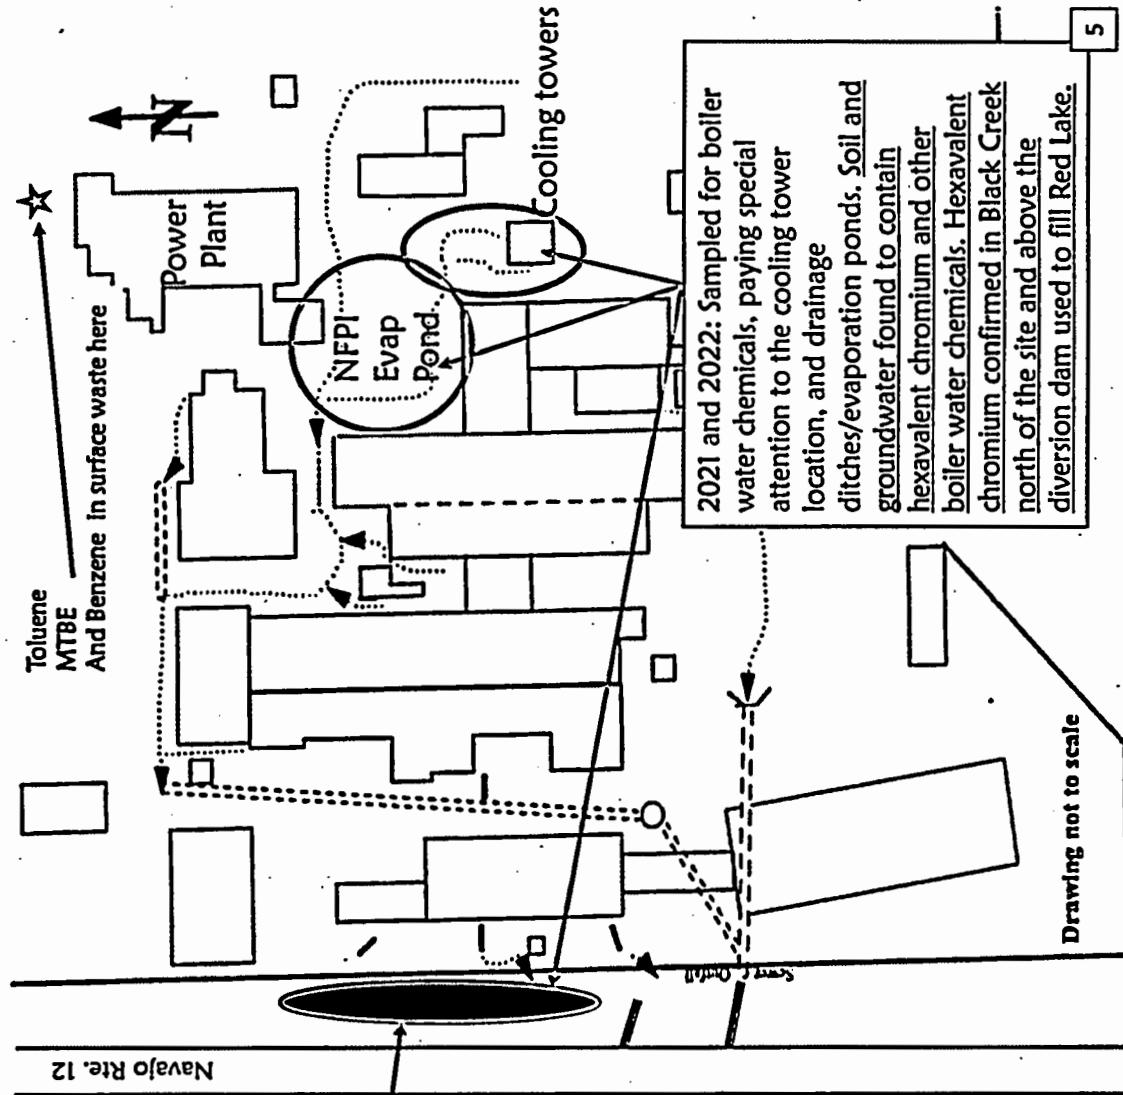

Ponderosa Products Inc. (PPI) the particleboard Manufacturing sub lessee drained boiler cooling water into the roadside ditch of N-12. From there, it proceeded under the roadway via culvert into the wash below Red Lake.

## PPI Boiler Water Evaporation Pond

2022: discovered hexavalent chromium and dioxins in the ditch outside the facility boundary fence to the east.

NFTUA Sewer Lagoon bypass ditch that drains directly into the wash.

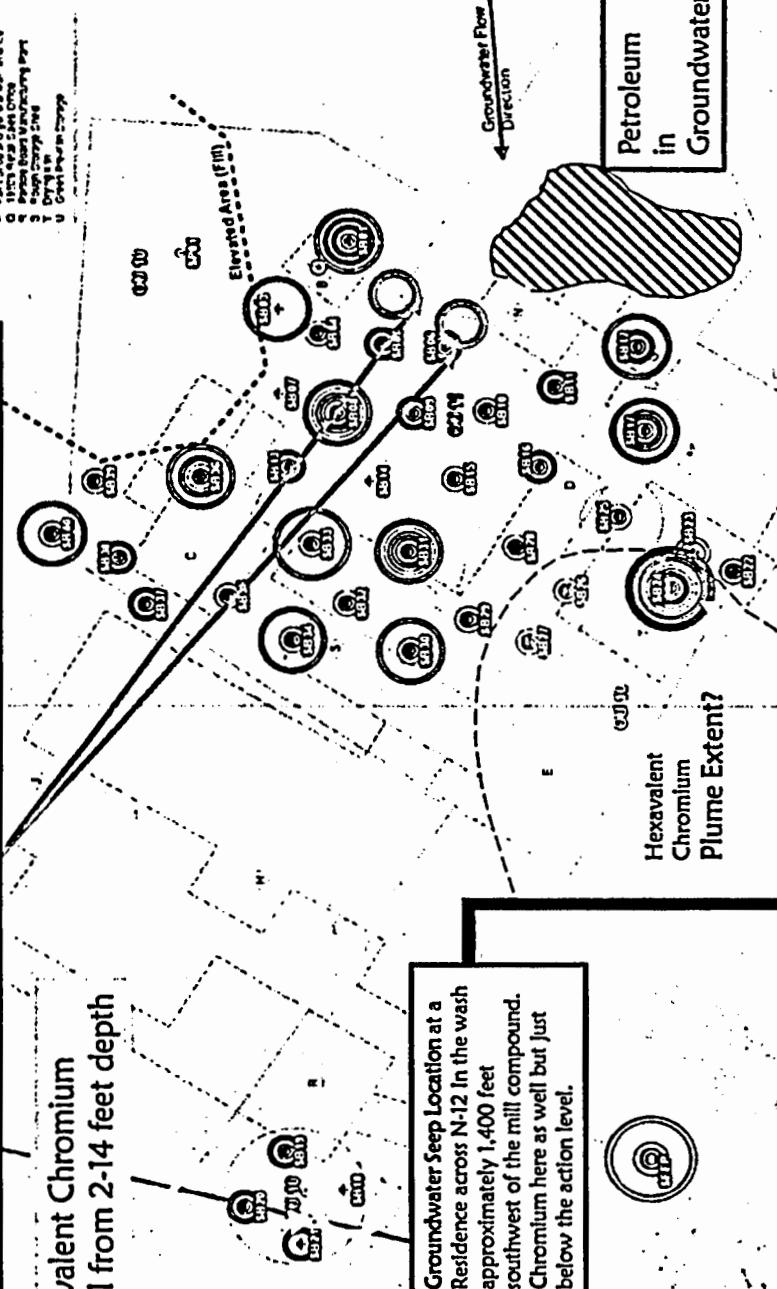

NFPI surface ditches and building sumps drained to the former NTUA Sewer Lagoons

## 2022 delineation of contamination preliminary results: Metals & Petroleum in GROUNDWATER exceeding action levels.

**Hexavalent Chromium in groundwater present but **below** the action levels**

**Hexavalent Chromium  
In Soil from 2-14 feet depth**

**Groundwater Seep Location at N-12**  
Residence across N-12 In the wash approximately 1,400 feet southwest of the mill compound. Chromium here as well but just below the action level.

**Petroleum  
in  
Groundwater**

**Hexavalent  
Chromium  
Plume Extent?**

**Hexavalent Chromium in  
groundwater **ABOVE** the action levels**

- ◆ Soil and Groundwater Sampling Location
- Soil Sampling Location
- Seep Sampling Location
- no samples were collected
- Appropriate Location of Former Evaporation Trench
- Appropriate Location of Former Structure
- Appropriate Site Boundary

The sample results were screened against the NIEPA Leaking Storage Tank Water Change Standards and USEPA Maximum Contaminant Levels.

Legend:

- ◆ UST
- Chromate
- Cadmium
- Lead
- Arsenic
- Hexavalent Chromium
- Benzene & Other Organics

1. Data is, including boron, dredge and dredge concentrations, and exceedances of the action levels. 2. Data interpretation done by Pan Upstate, NYCPA

Parameter	Value
Chromate	1.00
Cadmium	0.05
Lead	0.05
Arsenic	0.05
Hexavalent Chromium	0.05
Benzene & Other Organics	0.05

Comments: Sample NQ-1312-22001-1P  
is considered to be near surface contaminants, and not a true  
contaminant plume.

Metals Exceedances and  
Petroleum Hydrocarbons in  
Groundwater

6

### **Summer, 2022 Corrective Actions:**

Hexavalent chromium-based compounds are among the most efficient and cheapest boiler water corrosion inhibitors available. They were widely used from the 1940s through the 1990s.

- 2021 - Using the limited grant resources available to the program, Brownfields staff confirmed that hexavalent chromium has been released in the locations of the cooling towers, the power plant, and the pipes in between.
  - It was confirmed in the soil and groundwater.
  - Also that there is chloroform oozing up out of the ground as soil gas in that same area.
  - There are dioxins and furans in the soil of that area as well.
- 2022 - Site Specific Brownfields Assessment Grant funded field work indicates that the hexavalent chromium in groundwater is migrating down gradient.
  - Chromium is present in every groundwater sample and all but 1 soil sample ranging from 2 to 15 feet below the surface.
  - Hexavalent chromium (Cr-6) reverts to the more stable but still toxic chromium (Cr-3) over time.
  - Hexavalent chromium began to show up in the final two groundwater samples as funding ran out.
  - The groundwater seep or spring at a Residence across N-12 in the wash approximately 1,400 feet southwest of the site has cadmium, diesel organics, motor oil organics, and barium above the action levels. There is chromium here as well but below the action level
  - The petroleum plume delineated in 2018 has continued to migrate down gradient and has spread.
- 2022 – Environmental Justice Grant funded field work discovered hexavalent chromium and dioxins IN the sediments of Black Creek and in the drainage ditch to the east of the site.

Black Creek is eroding the facility dump  
Children playing in the creek, sheep grazing on vegetation in the flood plain, Creek water used for irrigation.

Water Contamination, Soil & Sediment Contamination:  
Hexavalent Chromium confirmed at levels exceeding the screening level for protection of groundwater.  
We have not yet sampled for other contaminants.

- Children play in the creek, livestock drink the water and eat the vegetation that grows along the banks of the stream. The creek water is used for irrigation for kitchen vegetables and crops. And to fill Red Lake.

- This major source of hexavalent chromium continues to erode and fall into the creek with every rain/snow melt event.

- Emergency intervention to prevent any more of that pile of waste from falling into the creek has no funding and will be among one of the first actions taken using this trust fund.

- A phased approach to characterize the soil in the creek and the flood plain will be needed to assess the extent of the hexavalent chromium and other contaminants in the soil and water of the entire drainage west and south of the site.

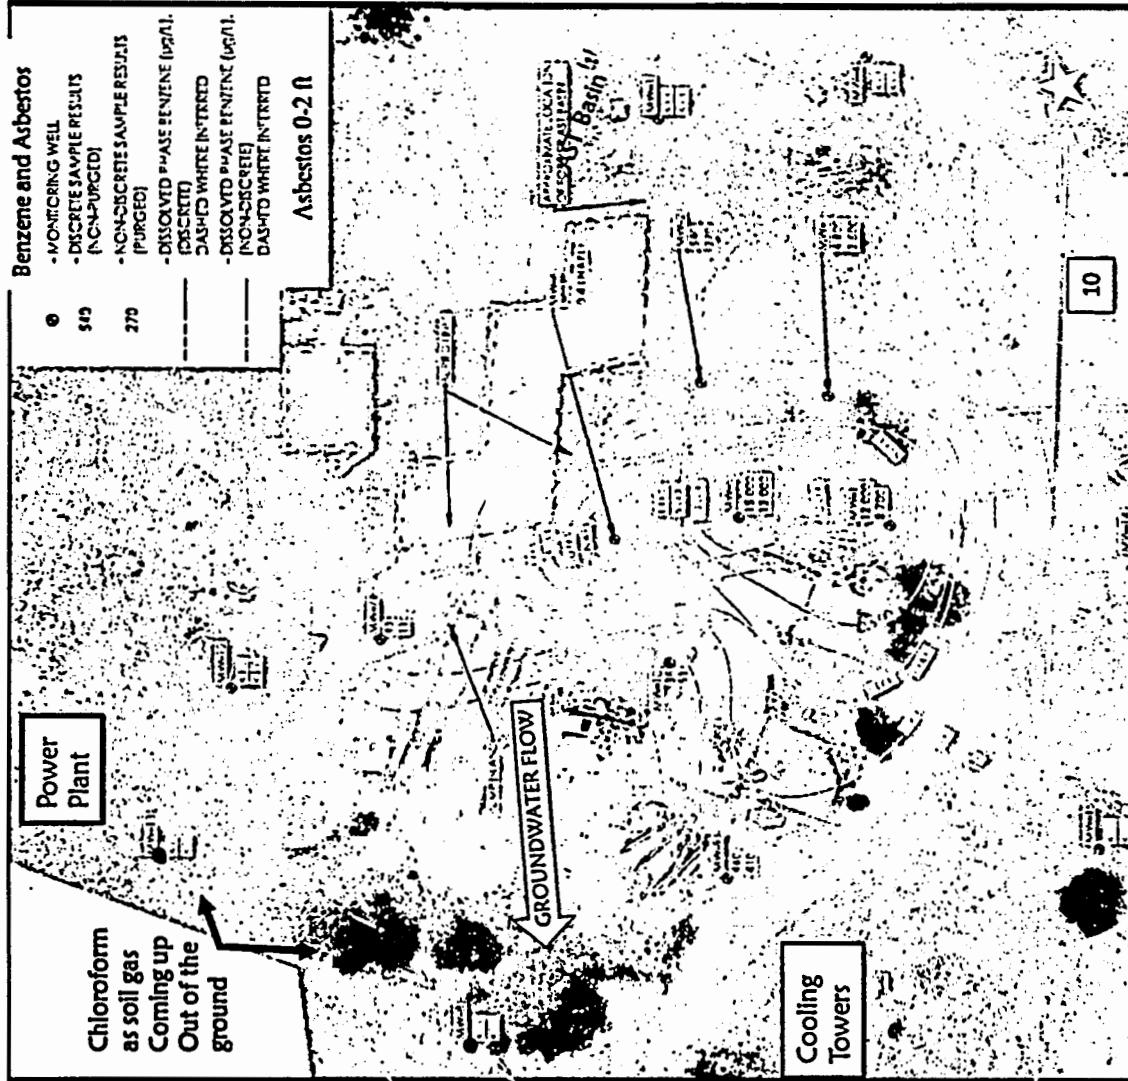

- A further discussion of this dump will be presented in greater detail later in the presentation.

## An Area of Comingling of Contaminates

### Groundwater Contamination, Soil Contamination; Petroleum, Asbestos, Hexavalent Chromium

- Petroleum groundwater contamination approximately 2 acres (as of 2018). The shallow aquifer is at an average of 20 feet below ground surface.
  - Two feet of Diesel fuel floating on top of the groundwater had been reduced to an inch or less by 2018. Fuel is likely re-accumulating since the initial reduction because the source soil is heavily contaminated. There has been no remediation activity at the site due to the pandemic, and lack of non-federal funding to hire a remediation contractor.
  - There are approximately 22,000 cubic yards of heavily contaminated source soil "bleeding" diesel and gasoline into the groundwater.
- Asbestos is comingled in the petroleum contaminated soil to a depth of at least 2 feet in a portion of that soil making any cleanup plan very complicated.
- Hexavalent Chromium has been found in the groundwater, the surface soil, and soil at depth very near the petroleum contaminated soil. It is probably co-mingled. It has recently been discovered in Black Creek to the north of the site and in the ditch that bounds the site on the east. Further investigation/delineation is needed.
- The soil gas report from the 2021 TBA shows Chloroform off-gassing from shallow soil in the area of the powerplant and cooling towers.
- Chemicals in the drum storage yard on the east side of the site were the subject of an inspection in 1991 where the rubber soles of the inspector's boots were melting off.
  - This area was apparently covered with soil.
  - It is not clear if the area was remediated or just covered.

**Notes:**

**ALL STREAM AND WASH SEDIMENTS ARE SUSPECT**

All sediments must be evaluated for the presence of RCRA Metals, Hexavalent Chromium, Formaldehyde, Asbestos, and other hazardous, toxic, and carcinogenic substances.

- Black Creek above and below the diversion dam extending a mile and a half east along the facility dump.
- The fenced-in facility compound.
- The former sewer lagoon's located in the wash below Red Lake;
- The wash below Red Lake for a distance yet to be determined, and
- The lake bed of Red Lake

**BECAUSE OF:**

1. The fact that Black Creek and it's tributary have been and ARE CURRENTLY ERODING THE FACILITY DUMP,
2. the quantity and diversity of the automotive and equipment batteries and chemicals (including mercury and formaldehyde) used in the various processes of a sawmill and particle board manufacturing operation were placed in the dump.
3. the myriad of drainage ditches and underground pipes across the site and their potential for leakage,
4. the underground pipe drainages beneath the roadway and those that bypassed the lagoons and drained straight into the wash below Red Lake Dam,
5. the facility discharging all waste water and boiler blowdown water directly into:
  - Black Creek, and the wash above and below the dam
  - The roadside ditch along IR-12, and
  - The NTUA sewer lagoons
- the levels of Mercury In the fish In 2004 Navajo Surface and Groundwater and US Fish and Wildlife conducted a water quality test of Red Lake
  - A Fish Advisory to not consume fish from Red Lake.
  - The lake was drained because of dam structural issues. The sediments were not sampled and the lake is being filled back up and stocked with fish.
- All waste from the facility was disposed of in the dump.
- Lake water is used for irrigation for crops and kitchen vegetables.
- The lake is used for recreation.
- Children play in the creek and lake water.
- Livestock drink the water of the Red Lake and of Black Creek and consume the vegetation growing in the creek bed.

**Black Creek is actively eroding the 167+ acre open dump. It's water is used to fill Red Lake**

**Additional Assessment, on hold due to no \$\$**

- Assessment of the stream water and sediments,
- Sediments behind the diversion dam,
- Sediments in the diversion ditch, and
- Sediments in the lake are needed now more than ever since hexavalent chromium had been confirmed in the creek.
- Sampling the lake sediments will require special equipment
- Sampling the former location of the NTUA Lagoons may require permission from NTUA.

**The Facility Open Dump**

- Sampling the open dump will take specialized sampling and safety equipment to not injure workers because of questionable subsurface strength due to smoldering fires throughout the years
- Open dumps make their own chemical contaminates. As water percolates through the dump aerobic and anaerobic conditions are encountered.
- Contaminates such a cyanide can be created and leach out of open dump; a comprehensive list of possible contaminates will need to be developed.
- The debris in the dump will have to be assessed for content, density, contaminates, and to calculate the cubic yardage of the debris.
- There will be LOTS of automobile batteries in the dump.
- There will potentially be contamination found in the soil and groundwater beneath the dump, as well as in the stream sediments, and in the sediments of Red Lake.

**Corrective Measures**

1. Need to fund an emergency contract to pull the waste back from the rim of the wash ASAP.
2. That requires full closure of N-31 which is only (closed "on paper")
3. The resident on N-31 needs safe access to the paved road to the east so they don't have to use N-31 any longer.

The areas outside of the fenced in compound will each need a sampling plan specific to the conditions of the area.

**This pile (both pictures) is IN the flood plain of Black Creek**

It contains dioxins and it contains hexavalent chromium at a level 15 times higher than that allowable for the protection of groundwater. Another 1,500 + cubic yards of this waste fell into the creek during the last monsoon season and winter.

13

## NFPI Mile Long Facility Open Dump: a Public Health Threat

- The facility open dump extends more than a mile up Black Creek
- The high wall at the most recently active end of the dump, is about 50 feet tall X 150 YARDS wide
- There is a newly discovered abandoned 10-inch water well in the wash adjacent to the site. It needs investigation and sampling. This improperly abandoned well could be a conduit for contamination to the deeper groundwater.

The dump extends through Black Creek Canyon along Old Rte. 31 (a dirt road north of the facility) past a tributary that feeds into the creek one mile east of the facility. There is waste material on both sides of the road and on both sides of the tributary which has cut an erosional channel through the dump.

Run off and rain water percolating down through an open dump leach out chemical elements that recombine to form more toxic contaminates than were placed into the dump.

- There is potentially too much waste in the open dump to transport to another facility. Several million cubic yards of debris will likely not be accepted by any "nearby" existing landfill.

• Nearby is a relative term; there are no nearby permitted landfills.

- The cost of hauling is exorbitant
- We must develop a waste separation, characterization, and then reduction plan.

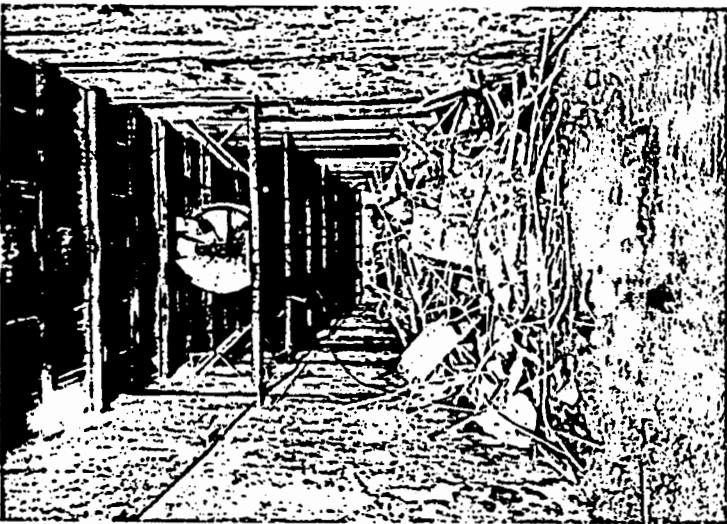

This erosion of the open dump is a PUBLIC HEALTH THREAT.

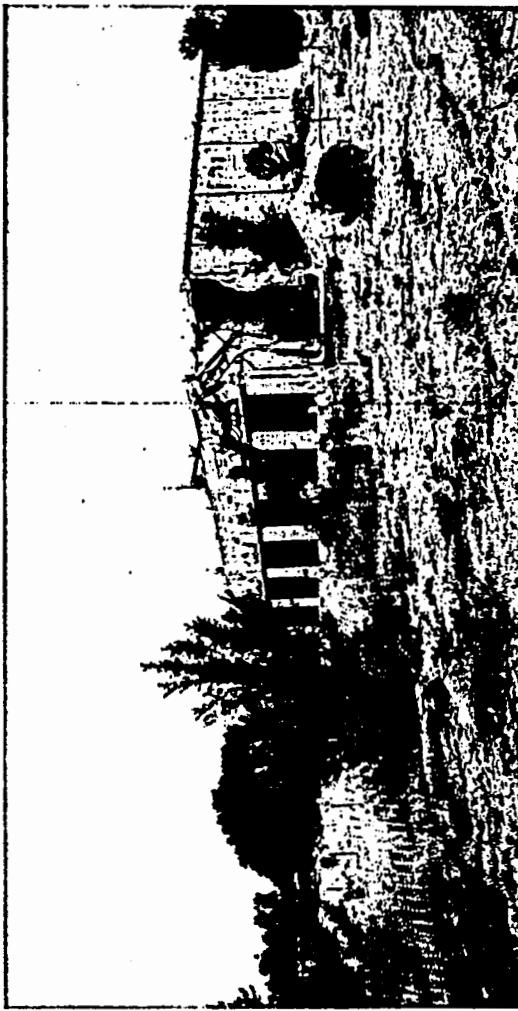

### **ASBESTOS HAZARD; MOSTLY MITIGATED**

Surface Asbestos was addressed through a one-time Emergency Time Critical Removal Action through USEPA Superfund Region 9 (summer 2021)

- There were large diameter Transite pipe fragments at the powerplant location and the cooling towers location. They were removed but there are piping and pipe fragments beneath the surface remaining in each area.
- The remaining underground piping for fire suppression and other transport of fluids throughout the 104 acre facility is either known as or suspected to be suspected to be Transite, an Asbestos Containing Material (ACM).
- ACM roofing material (some as much as 60% asbestos fibers) was present on the ground over much of the site and was concentrated at the lumber sales slab of PPI. An unknown quantity remains sub-surface in the area.
- Vermiculite insulation at the near surface and sub-surface remains in several areas of the site.
- Asbestos in soil remains commingled with the petroleum contaminated soil due to improper tear down of the power plant.
- 

15

The drums and totes of hazardous waste were removed during the TCRA summer 2021.

- The amount of remaining waste metal of all types littering the site is enormous.
- There are piles of heavy equipment tires.
- There are piles of the remains of all of the concrete foundations and slabs, some of which are contaminated by oil and grease deposits.
- There are pits, sumps, and manways that are traps for children and animals.

### **Physical hazards; the Particle Board Slab**

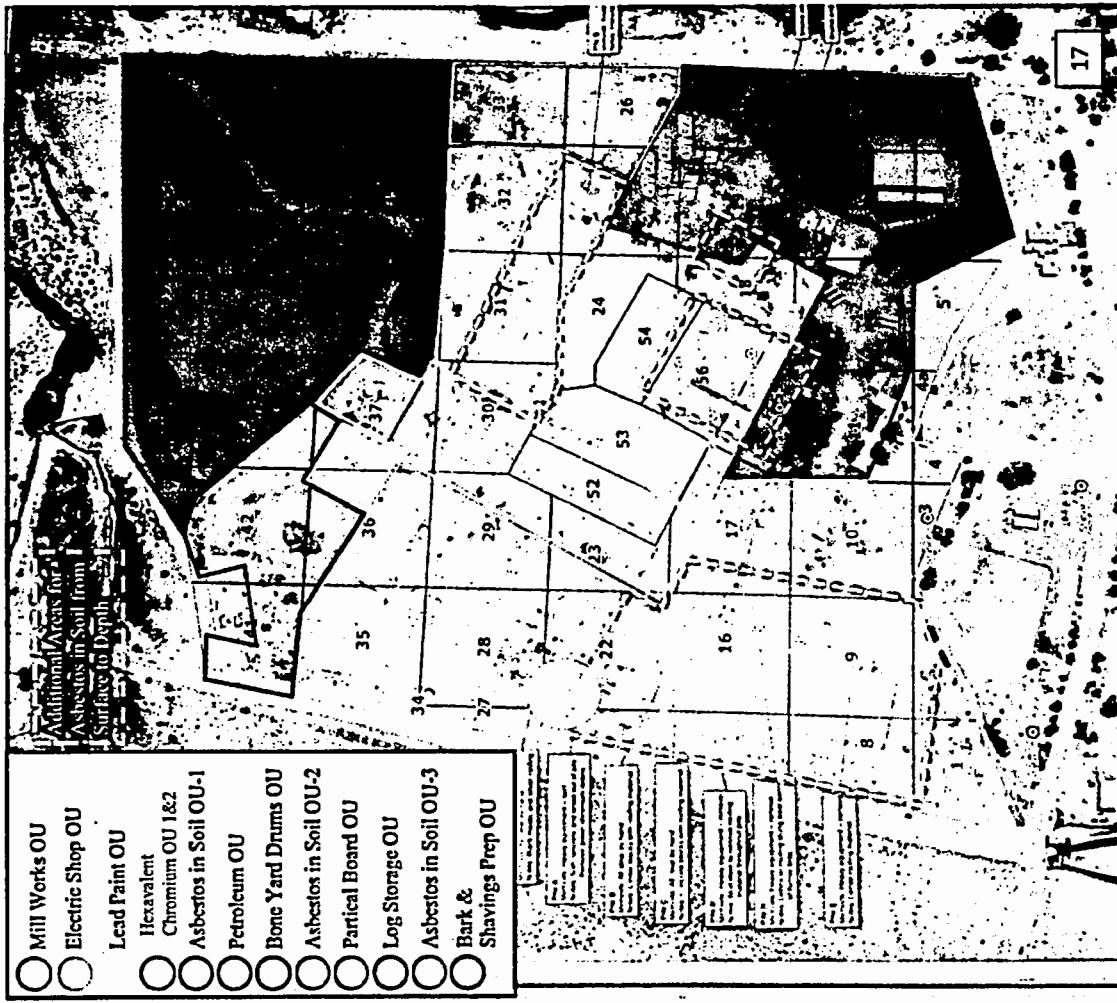

The Particle board press sump is roughly 80' X 25' and is 15 feet deep at the edges with vertical sides. No ladders or other means of egress are to be seen in the sides. The sump is deeper in the center. This sump always has water in it, either completely full or down 3 feet or more as evaporation occurs.

- There is a greasy slimy sheen on top of the water.
- There is dark oil staining of the concrete and soil along the southern and western edges of the sump.
- It is reported that the people who purchased the machinery dumped all of the oils and fluids out on the bank behind the building before hauling. This area is stained a dark black and is at the top of the embankment for Navajo Rte. 12.
- RECENT RECORDS DISCOVERED BENEATH A BURNED PILE ON SITE INDICATE THE POTENTIAL FOR A VAST AMOUNT OF VERY NASTY CONTAMINATION SURROUNDING THIS AREA EXTENDING INTO THE FLOOD PLAIN ACROSS THE HIGHWAY
- The ditch beside Indian route-12 was described as always containing brown-black, foul smelling water. See slide #1.
- There was a hot process to add gules, resins, urea formaldehyde, etc. to the waste shavings before they were pressed.
- There were boilers and at least one cooling tower in this area.
- There was a large trash pit in the area.
- Leaking hydraulic oil was a constant problem in this plant. So much so that they began to pour the oil onto piles of sawdust as absorbent then disposed of it all in the facility dump.
- Facility well #29 (unknown depth) is still in this area, unsampled and unplugged, and is a possible conduit for contamination to the deeper aquifers.

This sump (left) was for the particle board press. The floating foam was the "solution" of the contractor who removed the metal buildings to render the sumps non-hazardous after the buildings were removed. The foam did not last in solid form and can be seen blowing around the site floating on water and caught in weeds.

The sanding & melamine press smaller sump, (right), of unknown depth in the same slab. It is nearly full of smelly black soil and stunted plants. When it has water visible in it there is an oily rainbow sheen on top of the black water.

17

### Navajo EPA Brownfields Program Sampling Strategy for NFPI: A Plan Under Development. For the Mill Site Within the Fence:

- Separate the site in operational units such as these to maximize the possibility of winning more than one cleanup grant.
- Render all immediate hazards safe or safer
  - The hydraulic press sump, the facility supply well #29, and the unknown well in the wash are priorities
  - Stream bank stabilization to stop the eroding landfill
  - Delineate the hexavalent chromium and formaldehyde
  - Permanently close Old Rte. 31 and stop traffic passage through the dump because of fugitive dust creation and breathing exposure to drivers and near by residences.
  - Detailed site assessment to create a 3D site conceptual model for each operational unit & eventually, the entire site

Meticulous Sampling Is Needed Because NFPI has no Conceptual Site Model (CSM).

#### Within the fenced in compound:

With the exception of the diesel and gasoline contamination, we don't know where anything is. Without a CSM a cost estimate and timeline can't be determined accurately. That is why thorough assessment is needed. Detailed assessment takes time and costs money.

- Sampling of the soil from the surface to the groundwater table (~20 ft) will yield a thorough 3-D map of contamination provided the right Contaminates Of Concern are sampled for in the correct areas.

- There's a chance it can be less contaminated than it appears to be.
- There's an equal chance it can be more contaminated than is appears to be.
- The site has sat for 25 years with sporadic cleanup efforts with years and decades in between allowing contamination to spread.

**NFPI Current List of Suspected Contaminates by Operational Unit. The waste from all of these areas went into the dump.**

Area	Media	Potential Contaminants of Concern
Power Plant	Soil, air, ground water	Asbestos Containing Material (ACM), lime, sodium, mercury, sulfuric acid, hexavalent chromium, solvents, water treatment chemicals
Saw Mill	Soil, Surface, and ground water	ACM, lubricants, PCBs, mercury, pitch solvent
Green Chain: Sorting, Stacking, Pre-Kiln Storage	Soil, air	ACM
Drying Kiln, Cooling Shed & Surrounding area	Soil, air,	Possible polychlorinated biphenyl (PCB), mercury, lubricants, solvents
Planer between buildings	Soil, air, groundwater	Possible polychlorinated biphenyl, mercury, lubricants, solvents
Resaw, Millwork, Cut Plant	Soil	Lubricants, Solvents, hexavalent chromium
Bark Processing Plant	Soil	
AST Basin	Soil, groundwater	Gasoline, diesel, former AST's marked "chemicals"
Cooling Tower	Soil, ground water	Acids, lime, sodium, mercury, sulfuric acid, hexavalent chromium
Gasoline Engine Repair Shop	Soil, Groundwater	Stoddard solvent, 1,1,1-Trichloroethane, dichlorobenzene (DCB), lubricants, solvents, anti-freeze, acids, muriatic acid
PPI's Mechanical and Electrical Shop	Soil, Groundwater	Possible polychlorinated biphenyl, mercury, lubricants, solvents, acids, muriatic acid, resins, degreasers, machine oil, asbestos
Electric Shop	Soil	Possible polychlorinated biphenyl, mercury
Water Tower	Soil, Air	Lead
Electric Sub Station	Soil	Possibly PCB's
Warehouse/Small vehicle maintenance (had been the heavy equipment shop until the CAT shop was built)	Soil, groundwater	Stoddard solvent, 1,1,1-Trichloroethane, DCB, lubricants, solvents, anti-freeze, muriatic acid, degreasers, brake and transmission fluid, motor oil, asbestos comingled in soil with diesel and gasoline.
CAT/Heavy Equipment	Soil, groundwater	Stoddard solvent, 1,1,1-Trichloroethane, dichlorobenzene (DCB), used motor oil, lubricants, solvents, anti-freeze, acids, muriatic acid, brake fluid, hydraulic fluid
Paint Shop and General Maintenance	Soil, Groundwater	Lead, paint thinners, solvents, lubricants
Waste Shavings Receiving		Physical crushing hazard from falling concrete walls.
Particle Board Manufacturing Shavings Prep,	Soil, Groundwater	Cesium-137, Americium-241, Stoddard solvent, 1,1,1- Trichloroethane, dichlorobenzene (DCB), acetone,
Formaldehyde Application Area, Compression-Gluing- Trimming, Vinyl Laminated Particle Board Lime	Soil, air, ground water	waste oil, formaldehyde, acetone, adhesives, soluble oil in water mix, hydraulic fluid, machine oil, current physical drowning hazard,
Particle Board Storage: 40		Possible PCB's mercury, formaldehyde

## NFPI Current List of Suspected Contaminates, Continued

<b>Former sewer lagoons And sediments in the overflow routes from the lagoons</b>	<b>Soil, Groundwater</b>	Multiple discharge permit violations; Boiler blow down water, asbestos, RCRA metals, lime, sodium, mercury, sulfuric acid, hexavalent chromium, polychlorinated biphenyl, resins, degreasers, paint thinners, paints, antifreeze, brake and transmission fluid, motor oil, formaldehyde, Stoddard solvent, 1,1,1- Trichloroethane, dichlorobenzene (DCB), lubricants, other solvents, anti-freeze, acids, muriatic acid...
<b>6-Facility Supply Wells: #26, #28, and #29,</b>	<b>Groundwater</b>	Asbestos, RCRA metals Other facility used chemicals
<b>Drainage via Culvert Beneath Route 12 and ditch Into the Wash and the Wash Itself</b>	<b>Soil, Groundwater</b>	Multiple discharge permit violations; Boiler blow down water, asbestos, RCRA metals, lime, sodium, mercury, sulfuric acid, hexavalent chromium, polychlorinated biphenyl, resins, degreasers, paint thinners, paints, antifreeze, brake and transmission fluid, motor oil, formaldehyde, Stoddard solvent, 1,1,1- Trichloroethane, dichlorobenzene (DCB), lubricants, other solvents, anti-freeze, acids, muriatic acid.
<b>Dam on Black Creek</b>	<b>Soil Groundwater</b>	Suspect Boiler Blowdown Water and Hot Lime Process water at least. <u>Confirmed</u> hexavalent chromium and dioxins (summer 2022).
<b>Dump: extends 0.9 miles up Black Creek on both sides of the road and onto the flood plain of the creek</b>	<b>Soil, Surface and Groundwater</b>	All of the waste from the NFPI went into the dump. Automotive repair waste, batteries, parts. ACM, formaldehyde, PCB, All POC's mentioned in this table. Residue from firefighting foam.
<b>Sawdust Disposal Areas</b>	<b>Soil, Surface and Groundwater</b>	Reported unknown areas of disposal of unknown substances throughout this sawdust disposal area. Residue from firefighting foam.
<b>Sediments Above the Dam In Black Creek and the Diversion Channel</b>	<b>Soil, Groundwater</b>	ACM, Anything leachable from the processed waste shavings and the dump; formaldehyde, metals, acids, lime, sodium, mercury, sulfuric acid, hexavalent chromium, Residue from firefighting foam.
<b>Red Lake</b>	<b>Surface water, Soil, Edible Fish</b>	Mercury. Other contaminates listed above as being derived from the dump and plant activities that have found their way into the lake by the diversion channel or any other means.

**SUMMARY:**

**Environmental concerns include:**

- The groundwater beneath the mill site is contaminated with hexavalent chromium, diesel, gasoline, arsenic, cadmium, chromium, lead, chrysene, naphthalene, and other compounds resulting from the incomplete combustion of organic matter –like sawdust.
  - Approx. 2 feet of diesel fuel is floating on areas of the groundwater at the site. Diesel contaminated groundwater area is about 2.5 acres.
  - Asbestos is comingled with the petroleum source soil in several locations at the site to a depth of two feet below ground surface.
  - We have not looked for anything else in the shallow groundwater due to lack of funding. We suspect heavy formaldehyde contamination.
- Soil at the site is contaminated by mercury, hexavalent chromium, dioxins, heavy metals, pesticides, asbestos, solvents, oil, grease, etc.
- Investigations have still to be conducted for other contaminates such as formaldehyde, resins, solvents, waxes, and etc.
- Trace amounts of formaldehyde were found in the seep, 1,400 feet southwest of the site.
- Chloroform gas is coming up out of the soil in the area of the powerhouse. (the only place we have sampled so far).
- There was discharge of cooling tower blowdown and boiler water into Black Creek east, north, and west of the site, and into the former sewer lagoons.
- These discharges contained lime, sodium aluminate, soda ash, sulfuric acid, descalants such as hexavalent chromium and algicides.
- There is also concern about mercury contamination in the sediments, water, and edible fish of Red Lake.
- The contents of drums and chemical totes that were present at the site have been found to contain or formerly contained ferrous chloride solution, hydraulic fluid, waste oil, diesel, gasoline, antifreeze, mercury, transformer oil-old enough to contain PCBs, saw glide lubricant, etc.
- The 176 acre open facility dump extends up Black Creek 1 mile and is known to contain sawdust soaked with formaldehyde, hexavalent chromium, and hydraulic fluid. All chemical wastes from operation and maintenance of the sawmill and particle board manufacturing, including equipment and automobile batteries, were disposed of in this dump.
- The open dump does not have any liner and, due to different conditions at depth in open dumps, chemicals and contaminates that were never placed into the dump can be created and leach out into the ground beneath the dump and into the creek.
- Old N-31 runs over the dump and the dust from traffic has the very real potential to contain asbestos, hexavalent chromium, formaldehyde, and etc.
- Asbestos fibers remain air born long after the visible dust has settled.
- Hexavalent chromium at levels substantially above the regional standard for protection of groundwater and dioxins have been leaching from the rapidly eroding facility dump since its placement and have recently been confirmed IN Black Creek north and east of the mill site, and behind the diversion dam used to fill Red Lake.
- The site had been a serious asbestos hazard up until last summer. Subsurface asbestos remains.
- The presence of various toxic heavy metals on the Site and in the creek could have resulted in impaired neurological development of children who live and attend school near the site. NNEPA is currently researching the uptake of metals and hexavalent chromium in edible plants and livestock

## **Current List of possible Federal Funding**

### **Competitive Grants Currently Applied For Will Be Available for Fiscal Year-24 If awarded**

1. Historic Bipartisan Infrastructure Law (BIL)
  1. \$2 million Community Wide Assessment Grant –Must be spent on no fewer than 10 sites across the Navajo Nation
  2. \$2 million Community Wide Cleanup Grant –Must be spent on no fewer than 10 sites across the Navajo Nation
- FY-23-27 Additional Grant
  - BIL Additional 128(a) Brownfields Program Grant with \$800,000 in site specific assessment and/or cleanup money budgeted \*\* with strings attached.

### **Competitive Grant Currently Being Considered**

- The Agency for Toxic Substances and Disease Registry (ATSDR) APPLETREE program/funding opportunity for Public Health Assessments. ATSDR has said "no" already once.

**\*\*A word about cleanup and federal dollars**

### **Why Tribal Funding Is Necessary**

- No assessment or cleanup of leakage from Aboveground Storage Tanks is allowed under federal EPA grants. The petroleum contamination at the site came from aboveground tanks.
- The "NO DIRECT EXPOSURE PATHWAY" justification used by USEPA to delay or avoid cleanup with federal funds all together.
- Assessment grants can not be used for cleanup.
- Cleanup Grants are not that large and can only be awarded once per site.
- Brownfields Cleanup Grants can not be used to cleanup groundwater because Groundwater is defined by Region 9 as "not real property".

**NFPI Assessment (and Limited Cleanup) Approximate Costs**

Cleanup methods and cost can not be accurately determined until the nature and extent of the contamination is known

100% of the funds in this trust will be used for assessment and remediation of the site locations.

**Sampling and analysis only**

The 104 fenced Mill Site From The Surface To About 20 Feet Below Ground Surface	\$ 7,000,000.00
Black Creek: Ongoing Public Health Emergency	\$ 3,000,000.00
Red Lake; Sediments and Lake Water	\$ 3,000,000.00
The Wash Below Red Lake Dam	\$ 3,000,000.00
The former NTUA Sewer Lagoons	\$ 500,000.00
Investigation of the housing area build on top of the dump area including the former rodeo grounds	\$ 1,000,000.00
<b><u>Sampling, Analysis, and Cleanup of 2 areas</u></b>	
For the 176 Acre Facility Open dump, From The Surface Through an Unknown Thickness of Debris To Five Feet Below the Actual Native Ground Surface	\$ 500,000,000.00
The Benzene and Naphthalene in the Soil of the DEAP Charter School	\$ 1,000,000.00
<b>Estimated Total:</b>	<b>\$ 518,500,000.00</b>

## Cleanup Cost Comparison

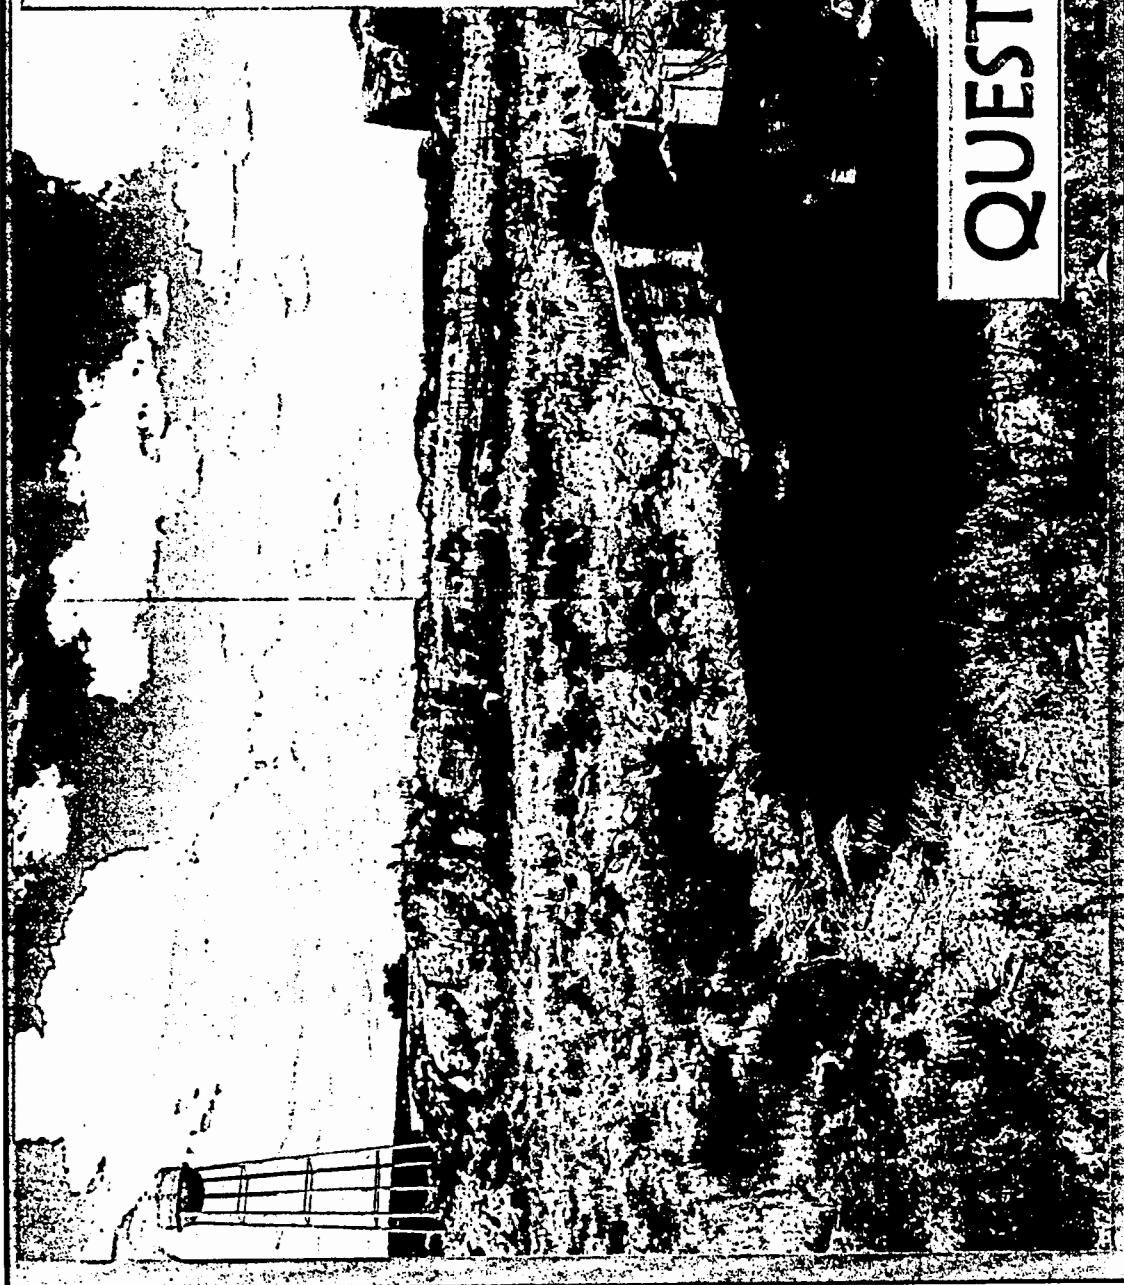

### Libby Montana Asbestos Site    \$850 million So Far

- For 30 years vermiculite was mined near the town.
  - In 1999, USEPA responded to citizen, local government and media concerns regarding possible exposure to asbestos from the nearby vermiculite mine. They estimated a two-year cleanup.
  - USEPA's Removal program began conducting investigations and removal actions to address asbestos contamination beginning in 2000 and the site kept getting larger and more complex as the investigation proceeded.
  - By 2016 the cost for cleanup had exceeded \$450 million.
  - More than \$600 million of federal money was spent during the decontamination efforts during the ensuing 18 years.
  - \$250 million more was spent by the responsible party.
  - Plus, the responsible party has billions of dollars in health related claims to settle.
- 
- Twenty one years later, in 2020, the USEPA transferred oversight and responsibility for much of the project to the Montana Department of Environmental Quality, but;
  - USEPA retains cleanup authority of the mine site and is still working there.

**NFPI is a Public Health Threat to:**

- The community of Navajo,
- The groundwater & springs
- The communities downstream,
- Anyone using Red Lake for recreational purposes or irrigation.

It needs assessment and cleanup to protect human health and the environment.

EXHIBIT

2

September 2, 2022

Mr. Jeremy Johnstone  
Federal On-Scene Coordinator  
U. S. Environmental Protection Agency  
Region 9, Emergency Response Section  
75 Hawthorne Street  
San Francisco, CA 94105

**Subject:** Sawmill, AZ Asbestos Removal Assessment  
Sawmill Chapter, Navajo Nation, Arizona  
Task Order (TO) No.: 68HE0919F0081-20  
Document Control No.: 0145-08-AAXL

Dear Mr. Johnstone:

Under TO No. 68HE0919F0081-20, the U.S. Environmental Protection Agency (EPA) Region 9 tasked the Weston Solutions, Inc. (WESTON®) Superfund Technical Assessment and Response Team (START) to assist the EPA Federal On-Scene Coordinator (FOSC) at the Sawmill, AZ Asbestos Removal Assessment in Sawmill, Apache County, Arizona, in the Sawmill Chapter of the Navajo Nation (Figure 1). The objective of this Removal Assessment was to further evaluate the presence of asbestos associated with the former Drying Kiln Building as well as perform an assessment of the building material debris located throughout the Site. This letter report summarizes the support activities provided by START for the Sawmill, AZ Asbestos Removal Assessment.

### **SITE DESCRIPTION**

The Sawmill, AZ Asbestos Site is near Indian Service Route 7 in Sawmill, Apache County, Arizona, in the Sawmill Chapter of the Navajo Nation. The geographic coordinates for the approximate center of the Site are Longitude 35° 54' 8" North and Latitude 109° 9' 50" West. The Site is approximately 7 acres and includes the former drying kiln area, power plant area, and several unknown features (Figure 2).

The Site is approximately 7,675 feet above mean sea level and is flat with regional topography sloping gently to the southeast toward the Quartzite Wash Reservoir, approximately 1 mile away.

### **BACKGROUND**

Construction at the Sawmill, AZ Asbestos Site started in 1939 and the Site was decommissioned after Navajo Forest Product Industries was brought online, around 1962. Historically, several buildings were present on-site, including a drying kiln building, a power plant, and several unknown buildings. It appears all structures have been demolished with only concrete slabs or minimal remnants remaining except for the former Drying Kiln Building. The Site is unfenced with open access and shows obvious signs of trespassing.

A Site visit was conducted by EPA and Navajo Nation Environmental Protection Agency

September 2, 2022

(NNEPA) in the summer of 2021. Collected samples confirmed the presence of asbestos-containing material (ACM) in building materials. The roof of the former Drying Kiln Building has collapsed but the walls are standing. Analytical results from previous sampling show asbestos concentration of the black wall coating is 3% chrysotile and the concrete was non-detect.

### **FIELD ACTIVITIES – JULY 12, 2022**

On July 12, 2022, EPA and START personnel participated in a Site walk with NNEPA. The Site walk was performed to further evaluate the building materials associated with the former Drying Kiln Building for the presence of asbestos. In addition, an assessment was performed during a Site walk to evaluate building material debris located throughout the Site for the presence of asbestos. Samples were collected from the former Drying Kiln Building, a concrete trough to the west, and from the former Power Supply Building. A certified asbestos building inspector performed the sampling. Sampling locations were selected by the EPA FOSC and the asbestos building inspector in the field.

To perform the assessment, START collected 12 bulk asbestos samples from the Site (Figure 3). Analytical reports and chain-of-custody documentation are included in Appendix B.

The bulk asbestos samples collected at the Site were sealed in the appropriate sample container, assigned a discrete sample identification number, and submitted using proper chain-of-custody procedures. The bulk building material samples were submitted to EMC Labs Inc. (EMC) and analyzed by polarized light microscopy (PLM) by EPA Method 600/R-93/116. EMC is an accredited laboratory in the National Voluntary Laboratory Accreditation Program (NVLAP) for bulk asbestos fiber analysis.

### **ANALYTICAL RESULTS**

Twelve bulk samples were collected, and 13 separate layers were analyzed. Of the 13 bulk samples collected, nine samples contained asbestos at concentrations ranging from 3% to 80% chrysotile. Sample results are shown below in Table 1. Figure 3 shows the location of the asbestos bulk samples collected at the Site.

**Table 1**  
**Bulk Sample Results – July 2022**

<b><u>Sample Number</u></b>	<b><u>Bulk Sample Description</u></b>	<b><u>Asbestos (% / Type)</u></b>

<u>Sample Number</u>	<u>Bulk Sample Description</u>	<u>Asbestos (% / Type)</u>
<b>SAZ-BS-005</b>	Asphaltic Roofing, Black	Not Detected
<b>SAZ-BS-006</b>	Asphaltic Roofing, Black / Gray	Not Detected
<b>SAZ-BS-007</b>	Concrete, Off White w/ Black	Not Detected
<b>SAZ-BS-008</b>	Patch, Black	5% Chrysotile
<b>SAZ-BS-009</b>	Patch, Black / Gray	10% Chrysotile
<b>SAZ-BS-010</b>	Concrete under Corrugated Roof, Off White	3% Chrysotile
<b>SAZ-BS-011</b>	Fiberboard / Aircell, Black/ Gray	80% Chrysotile
<b>SAZ-BS-012</b>	Mortar, Beige/Gray	Not Detected

Note: \* Samples were analyzed by PLM by EPA Method 600/R-93/116 by EMC Labs Inc.

## DISCUSSION

Based on the analytical results of the samples collected during the Site walk, building materials are present at the Site with an asbestos content in excess of 1%. The ACM can be found scattered throughout the Site and in the area around the former Drying Kiln Building.

Building materials associated with the former Drying Kiln Building have an asbestos content in excess of 1%. Because the concentrations are above 1%, the materials are designated as ACM. Table 2 below serves to provide an estimate for the quantities of building materials estimated to contain asbestos greater than 1%. The estimates are based on a structure size of approximately 85 feet in length by 80 feet in width by 25 feet in height. Minimal asbestos coating was observed on the interior walls of the former Drying Kiln Building.

**Table 2**  
**Former Drying Kiln Building Material Estimates – July 2022**

Material Type	Quantity
Asphaltic Roofing with Mastic	6,800 SF
Coating on Interior Concrete Walls	3,000 SF
Corrugated Transite Roofing	6,800 SF

Notes:  
SF = square feet

The building materials identified to be ACM associated with the former Drying Kiln Building have deteriorated and have been dispersed by the wind to the surrounding area. Visibly identifiable ACM was observed in significant quantities at varying distances along each side of the structure ranging from 20 feet to 75 feet. The most significant presence of ACM appears to be located on the north and west side of the structure.

September 2, 2022

An asbestos evaluation was performed for various building material debris that was observed throughout the Site as a result of historical demolition activities. The assessment identified building material debris that contained asbestos in concentrations greater than 1% at various locations throughout the Site. The ACM identified included transite roof panels, fiberboard, corrugated roofing, and a black membrane. The remnants of this ACM appear to be present in various amounts throughout the Site. A majority of the identified ACM is located in and around the former Drying Kiln Building and the Power Supply Building. Some of the ACM is scattered about the Site and is not near one of these large sources.

### **SUMMARY**

EPA tasked START to provide support during the Sawmill, AZ Asbestos Removal Assessment in Sawmill, Arizona. The assessment was performed to further evaluate the building materials surrounding the former Drying Kiln Building for the presence of asbestos. Based on the analytical results of the samples collected during this Site walk, building materials that are ACM are associated with the former Drying Kiln Building. These materials include transite roof panels, fiberboard, corrugated roofing, and a black membrane on the interior concrete of the building.

An asbestos evaluation was performed for remnant building debris that was observed at various locations throughout the Site as a result of historical demolition activities. The assessment identified building material debris that contained asbestos in concentrations greater than 1% at various locations throughout the Site. Based on the data obtained to date, additional assessment activities appear to be required to ensure remnant debris from the historical demolition work is managed and disposed of appropriately.

Should you have any questions regarding the information presented in this letter report, please contact me at (480) 477-4918, or at [Greg.Roussos@WestonSolutions.com](mailto:Greg.Roussos@WestonSolutions.com).

Respectfully,

Weston Solutions, Inc.

Greg Roussos

Distinctly stratified, easily separable layers of samples are analyzed as subsamples of the whole and are reported separately for each discernible layer. All analyses are derived from calibrated visual estimate and measured in area percent unless otherwise noted. The report applies to the standards or procedures identified and to the sample(s) tested. The test results are not necessarily indicative or representative of the qualities of the lot from which the sample was taken or of apparently identical or similar products, nor do they represent an ongoing quality assurance program unless so noted. These reports are for the exclusive use of the addressed client and that they will not be reproduced wholly or in part for advertising or other purposes over our signature or in connection with our name without special written permission. The report shall not be reproduced except in full, without written approval by our laboratory. The samples not destroyed in testing are retained a maximum of thirty days. The laboratory measurement of uncertainty for the test method is approximately less than 1% by area percent. Accredited by the National Institute of Standards and Technology, Voluntary Laboratory Accreditation Program for selected test method for asbestos. The accreditation or any reports generated by this laboratory in no way constitutes or implies product certification, approval, or endorsement by the National Institute of Standards and Technology. The report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government. Polarized Light Microscopy may not be consistently reliable in detecting asbestos in floor coverings and similar non-stable organically bound materials.

7	Birdsprings #1 [5-2-1] SDV014		The SDV is in a remote area approximately 0.75 miles S of Havasu Rte N-15 near the old chapter house.	35.297507	-110.803755	Phase 1 assessment complete. Samples did not exceed screening criteria (40 ppm tosphene). There are 3 sites in this area. The lab data does not specify to which site these results belong.	2002	Pending further assessment			Birdsprings Chapter				Grazing; No housing development	Land Use Restriction on Public Record.		
21	Birdsprings #2 [5-2-2] SDV015		The SDV is located SE of Leupp, AZ and NW of Winslow, AZ. It is located on the Dicks residence, which is 2 miles NW of windmill Sk-319, and approximately 1.2 miles S of BIA Route 2, near Bird Springs, AZ.	35.184023	-110.823088	Phase 1 assessment complete. Samples did not exceed screening criteria (40 ppm tosphene). There are 3 sites in this area. The lab data does not specify for sure that they go with this site but there is a good possibility that they do. No closure report	2005	No Further Action			Birdsprings Chapter				04/28/20			
22	Birdsprings #3 [5-2-3] SDV016			35.282582	-110.857982	Phase 1 assessment complete. Samples did not exceed screening criteria (40 ppm tosphene). There are 3 sites in this area. The lab data does not specify to which site these results belong.	2002	Pending further assessment			Birdsprings Chapter				04/28/20			
23	Black Mountain SDV SDV017	NNDB86669133	The SDV is located on BIA 145, off State Rd 53, approximately 12 miles S of Mountain View community. Black Mountain is 1 mile E of the SDV.	34.898625	-108.298104	Phase 1 assessment complete. Samples did not exceed screening criteria (40 ppm tosphene). No closure document but tosphene was below 2.0 ppm in all samples as of 2002.	2002	No Further Action			Ramah Chapter				04/28/20			
24	Black Rock Butte SDV SDV018		3 N BB8 1/2 mile northeast of well 11T-S05 which is 3 miles north of Black Rock Butte. There is another called Tie Zin Shi Gash - Black Butte in the file. The picture has similar landscape. Perhaps there were 2 SDVs here.	36.187463	-109.289265	Phase II lab results 11-13-2002 show tosphene high in one sample.	2002								04/28/20			
25	Black (Water) Springs SDV SDV019	NNDB86669153	1.5 E Well 14-5-2 Or 9 miles west of Nachiti, NM. West on state Hwy 13A from Sheep Springs, NM approx 3.5 miles to Indian Service Rd 30 turnout.	36.029583	-108.831122	Tosphene is confirmed above the standard in some samples. Investigation summer, 2022									04/28/20			
26																	Requires remediation Remediation to begin summer, 2022

40	SDV034	Churchrock Old SDV	The SDV is located south of an unpaved road which branches off N59A for approximately ½ a mile, in an area known as Small White Mesa Flat, north of Chilchinbito, Arizona. The dip vat is visible from N59A.	36.604518	-110.130421	A possible fire pit area, where charcoal remains were visible, was observed south of the exit pad along the corral fencing. Drainage associated with the dip vat possibly could have been an arroyo which is located approximately 70 feet north of the dip vat, however no ditch or pathway was evident. Soil samples were collected from around the dip vat area and in the assumed fire pit area. All Phase I soil sample results did not exceed the screening criteria. Therefore, a Phase II investigation and additional sampling was not conducted.	2005	No Further Action	2006						04/26/20			
41	SDV035	Chilchinbito #3 (6-2-3) SDV		35.552891	-108.558757										Needs Investigation		04/26/20	
42	SDV036	Coolmine Canyon #2 (3-1) SDV	One of these 2 sites is 6 miles south of Hwy 264, about 100 ft east of windmill 3M-175. NSF notes.	36.905097	-111.152952	No files in the database									Needs Investigation		04/26/20	
43	SDV037	Coppermine (1-3-1) SDV	The original coordinates plot on top of a rock formation. Latitude was probably calculated incorrectly. Driving directions plot to the current placemark. Compare with waterwell data.	36.045345	-110.865414	No files in the database									Needs Investigation		04/26/20	
44	SDV038	Confidfields SDV	One of three 2 sites, 6 miles south of Hwy 264, about 100 ft east of windmill 3M-175, 5 N Ch., or Navajo Route 10 or 500 ft west of windmill 3A-215 off dirt road.	36.394334	-111.419265	No files in the database									Needs Investigation		04/26/20	
			8 miles SW of Hwy-264/191 intersection, 2 miles E of Blk Rd 15, 300 ft S of the Chapter House. 1/2 Ch or Near well 17-M-91A, southwest of Confidfields 1/5 mile. In a field near year-round residences and the Confidfields Chapter House. There is a church opposite the site. A windmill and well are 100' downgradient from the vat.			Removal Oversight by NSF; Removal; Capped w/ Imported fill material from Waste Management had PAHs < EPA Region 3's RBC soil levels); Closure of report EMI									Land Use Restriction on Public Record; Engineering Control = 1/4 C. Flat Site enclosing SDV work area that contains the regrated soil cap.			
																	Grazing, No housing development

Closure Document Pending approval. Last sample shipped 08/15/05. Where is the closure report? These are NSF notes.	2002	Find the closure report there is one.		PO Box 775 Navajo, NM 87228-0775	Crystal Chapter			04/28/20	Restricted	Grazing; No housing, development	Land Use Restriction on Public Record.	
51		The SDV is located just off US Hwy 64 N of Shiprock in a small community of residential structures and commercial buildings. This SDV was not in the original database of oil spills but has been added. This site had been bulldozed after complaints of pesticide odors emanating from the site. All signs of fire pit, well disposal areas, etc. were destroyed. The trench is buried under a foot of fill material. The alignment and process direction was assumed based on the entrance and exit pad sizes and the proximity to the site entry. There is a large drainage area north and west of the site.			Phase 1 assessment complete. Samples did not exceed screening criteria (40 ppm tosphene). Closure document pending.										Grazing; No housing development	Land Use Restriction on Public Record.	
SDV045 Cuclief SDV					No Further Action	2002								01/30/13	Restricted

7			Ojato #2 SDV is located in the Ojato Wash, north of the town of Ojato, Utah. To get to the site travel 2.8 miles north of the intersection of U.S. Highways 160 and 163 in Kayenta, Arizona, on U.S. Highway 163. Turn west on BIA Route #2 toward the town of Ojato and proceed approximately eight miles on a paved road until the road begins to bend to the south. Follow an unpaved road leading to the north for approximately three miles to the site.	37.112255	-110.269078	2006 sample data shows toxaphene below the standard in one of the four but don't say which. There appears to be no SDV at this location.			Needs investigation					04/28/20			
126			Ojato #3 SDV is located approximately 7.5 miles west of U.S. Highway 163 and approximately two miles south of the Arizona/Utah border. However, access to the site is difficult due to the numerous dirt roads which crisscross the area and limit access from U.S. Highway 163. ASCG personnel accessed the site by traveling to the Ojato Chapter House in Ojato, Utah, and proceeding southwest on a dirt road into Ojato Canyon. The site is located along the Ojato Wash.	36.970873	-110.230195	2006 same data shows toxaphene below the standard in one of the four but doesn't say which. There appears to be no SDV at this location.			Needs investigation					04/28/20			
127			Ojato #4 SDV is located approximately 1,000 feet northwest of U.S. Highway 163, and approximately 2.1 miles north of Kayenta, Arizona. The site is accessible from an unpaved road which connects to U.S. Highway 163, approximately three miles south of the Arizona/Utah border.	36.854231	-110.207942	2006 same data shows toxaphene below the standard in one of the four but doesn't say which.			Needs investigation					04/28/20			
128			Database notes indicate the possibility of two SDVs at this location. At a Coyote Canyon SDV	35.794932	-108.530703	In 2002 toxaphene was above the action level.			Needs investigation					04/28/20			
129																	
130			SDV123 Pine Springs #1 SDV			Site remediation, Federal On Scene Coordinator (OSC) Robert Mandel provided analytical results. Remaining soil underneath has toxaphene concentrations less than the cleaning goal. No closure document. Last sample analyzed on 12/05/94.			No Further Action					04/28/20	Grazing: No housing development		
																Land Use Restriction on Public Record.

7	SDV172	Rubble by Sweetwater SDV There were 2 SDVs in sweetwater. Not 3!	A pile of concrete rubble which appears to have been a SDV is located approximately 250 yards NW of the Tom Chide Corral (SDV #63 - Sweetwater #1).	36.8413382	-109.367425	Phase 1 assessment complete. Samples did not exceed screening criteria (40 ppm toxaphene). Closure document pending. Actually, the 2002 sampling event shows toxaphene above the action level.	2002	No Further Action	Find the closure report	None	Sweetwater Chapter			04/26/20	Restricted	Grazing: No housing development	
179	SDV173	Table Mesa SDV	BIA developing SAP for further assessment. 7 miles NE of Sanostee. Same as SDV151 and SDV177? Or is it the trench 37 yards to the SE of this one?	36.505068	108.787195	Remediated via removal 7/20/2020		No Further Action		PO Box 219 Sanostee, NM 87651	Sanostee Chapter			08/01/20	Restored	No Restrictions	
180	SDV174	Tsésto SDV (Near Seba Dakai)	The SDV is located off State Hwy 87, approximately 5 miles N of Seba Dakai School off of Navajo Rte N-61820 toward Tolani Lake.	35.49818	-108.514352	Phase 1 assessment complete. Samples did not exceed screening criteria (40 ppm toxaphene). Closure document pending.	2002	No Further Action	Find the closure report	None	Tsésto Chapter			01/30/13	Restricted	Grazing: No housing development	
181	SDV175	Tiger Lookout #2 SDV [Wildcat Butte]	The SDV is located off State Hwy 371 N of the Becht Chapter House, and E of the Hwy. The site is in an open plain with lots vegetation.	35.8763	-108.165269	Phase 1 assessment complete. Samples did not exceed screening criteria (40 ppm toxaphene). Closure document pending.	2002	No Further Action	Find the closure report	None	Standing Rock Chapter			01/30/13	Restricted	Grazing: No housing development	
182	SDV176	Todilena SDV	Three miles SW of Todilena, NM. Also, 7.5 miles W-SW of Two Grey Hills, NM. Pre-dip coral, the dip watch channel, partially dismantled post-dip corral and various posts are visible. There are two houses within 200 feet of this SDV.	36.204377	-108.923367	The 1996 sampling event indicated toxaphene above the action level. Investigation ongoing, scheduled for summer, 2022. Not complete as of 9/27/22.	1996	Needs remediation, scheduled for summer, 2022.		PO Box 7590 Newcomb, NM 87455	Two Grey Hills/Todilena Chapters			01/29/13	Restricted	Land Use Restriction on Public Record.	
183	SDV177	Tocito Dome SDV		36.50505	-108.78752	The 2002 sampling event showed toxaphene below the standard.	2002	No Further Action	Find the closure report	None				04/28/20			
184	SDV178	Todilena SDV	5.5 miles W of the intersection of Rte 64 and Rte 160. Approximately 650 ft SE of the windmill.	36.925074	-109.181733	Removal Oversight by NSF; BIA, as PRP with ASG as subcontractor; Capped with local virgin soil. Closure Document Pending Approval. Last sample analyzed 01/13/05.	2005	No Further Action		PO Box 106 Teez Nos Pos 2006	Teez Nos Pos Chapter			01/05/06	Restricted	Grazing: No housing development	
185																Land Use Restriction on Public Record; Engineering Control = Acre Plot Size enclosing SDV work area that contains the revegetated soil cap.

7																	
186	SDV179 Tohatch Bioremediation Pit #1, #2, #3, and #4 SDV	NND386669646	W of the road by 0.05 miles; Hwy 491 between Giant and Chevron at Tohatchi, NM.	35.850499	-108.757855	Bioremediation, Federal On Scene Coordinator (OSC) Robert Mandel provided analytical results. Remaining soil underneath has toxophene concentrations less than the cleanup goal. No closure document. Last sample analyzed on 12/07/94.	1994	No Further Action	Find the closure report	None	PO Box 1236 Tohatchi, NM 87325	Tohatchi Chapter	01/22/10	Restricted	Grazing; No housing development	Land Use Restriction on Public Record.	
187	SDV180 Tohatch-Oak Springs #1 SDV		The SDV is located approximately 0.5 mile E of US Hwy 491 0.8 mile N of mile post 22 on the S side of the community of Tohatchi.	35.844307	-108.748682	Phase I assessment complete. Samples did not exceed screening criteria (40 ppm toxophene). Closure document pending.	2002	No Further Action	Find the closure report	None	Tohatchi Chapter	04/28/20	Restricted	Grazing; No housing development	Land Use Restriction on Public Record.		
188	SDV181 Tohatch-Oak Springs #2 SDV		The SDV is 7.6 crow miles NNE of Tohatchi.	35.967672	-108.774366				Needs investigation								
189	SDV182 Tolani Lake (5+1) SDV		The SDV is located approximately 50 yards from Navajo Rd-N-15.	35.434079	-110.44954	Phase I assessment complete. Samples did not exceed screening criteria (40 ppm toxophene). Closure document pending.	2002	No Further Action	Find the closure report	None	Tolani Lake Chapter	04/28/20	Restricted	Grazing; No housing development	Land Use Restriction on Public Record.		
190	SDV183 Tolani Lake (5+1) SDV		The SDV is located NW of Tolani Lake, AZ. To get to the site travel north on BIA Rd 2 from Leupp, AZ for 3.4 miles. BIA Rd 2 will veer to the NE, but continue N on an unpaved road which gradually bends to the NW. At approximately 10 miles, you will cross the Dimmito Wash. Continue approximately one more mile to the next wash near its head. On foot, follow this wash approximately 0.8 mile to the SW to where it intersects with the Dimmito Wash and continue down the wash to the SW for another 0.4 miles to the site.	35.552956	-111.064398	Sediment samples were collected from around the dip vase area and within the corralline structure. All Phase I soil sample results did not exceed the screening criteria. Therefore, a Phase II investigation and additional sampling was not conducted.	2005	No Further Action					2006				
191	SDV184 Tolani Lake (5+1) SDV		Map and picture in the file. Nothing else.	35.718315	-110.529268				Needs investigation					04/28/20			
192	SDV185 Tony Tsoie Torreon SDV		Approximately 2 miles E of Fort Defiance maybe on Coalmine Rd.	35.727454	-109.027625	The 1996 sampling event showed toxophene elevated but below the action level.			Needs investigation					04/28/20

## Navajo Nation Environmental Protection Agency Brownfield Environmental Remediation Fund Priority Ranking Process

A brownfield site inventory is a planning tool. The Navajo Environmental Protection Agency (Navajo EPA) Brownfields Program has developed a comprehensive, publicly accessible inventory of known Brownfields sites within the Navajo Nation. At its most basic, this inventory should be a list of all Brownfield sites within the boundaries of the Navajo Nation. The Brownfields Program's inventory takes the form of a simple spreadsheet. It is a living document and maintaining and updating it are requirements of the USEPA 128(a) grant that funds the program. The Brownfields Inventory must be updated at least yearly.

When selecting a Brownfields site to be cleaned up in preparation for redevelopment\* using the Environmental Remediation Fund, the Environmental Remediation Fund Priority Ranking Criteria must be considered.

The Navajo EPA Brownfields Program will select sites for cleanup using Priority Ranking Criteria. Also, communities may apply to the Navajo EPA Brownfields Program with sites for consideration whether or not they are not on the Brownfields Inventory. Communities must form a stakeholders committee to petition the Navajo EPA Brownfields Program Manager or the appropriate Navajo EPA Division or Department Manager, with members from local businesses and community groups. These groups will bring transparency to this process, along with the community's differing perspectives.

### Environmental Remediation Fund Priority Ranking Criteria

Criteria:

- 1) Contamination
  - a) Is a site known to be contaminated?
    - i) Has the site already begun the contamination investigation and assessment process?
    - ii) Known contamination type(s), danger, and extent.
    - iii) Transportation of contamination via groundwater, soil, wind, and other means.
  - b) Suspected contamination?
    - i) Can one infer, based on prior site activities, that a site is at low or high risk for contamination?
- 2) Geographic regional floodwater, wind, and other erosional effects.
  - a) Proximity to housing, pasture, and recreation areas.
- 3) Existing land use.
- 4) Cultural resources in the area.
- 5) Infrastructure:
  - a) Whether the site has the necessary infrastructure for redevelopment at or nearby, including:
    - i) roads
    - ii) utilities
    - iii) drainage.
- 6) Location: Whether the site is in a desirable location for redevelopment such as
  - a) Close to amenities
  - b) Close to recreation areas.
  - c) High-tourist corridor areas.
- 7) Geographic region
  - a) Already part of a defined township, withdrawn area, or other redevelopment area?
  - b) A blighted section of a community?

Other things to consider.

- 1) Existing land use
- 2) Predominantly residential areas?
- 3) Commercial areas?
- 4) Proximity to sensitive cultural locations?
  - a) Are sites near schools and parks?
  - b) Archaeological cultural resources?
- 5) Natural resources
  - a) Useful to protect a wetland?
  - b) Is there a nearby stream or lake?

## **Using The Navajo EPA Brownfields Program's Brownfields Site Inventory to prioritize/Rank sites.**

Once the most important criteria are determined, move to prioritization or ranking of the sites.

Assign a numeric value to each of the above criterion.

Example. Using the proximity of a site to a popular recreation area as the criterion.

- If a site adjoins a campground, lake, trail system, or other recreation area it's assigned a value of 5.
- Within 250 feet (ft) = 4.
- Within 500 ft = 3.
- Within 750 ft = 2.
- Greater than 1,000 ft = 1.

Expand and rank each of the criteria similarly. Then sum the numeric values for each site and sort from highest to lowest.

Now there is a prioritized Brownfields site inventory!

Benefits to having a prioritized Brownfields site inventory.

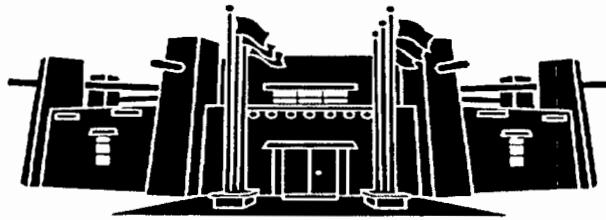

- Ability to quickly select a site if investigation and remediation funds become available.
- Confidence that the limited funds are being spent investigating and cleaning up the sites that are most important to the community.
- Ability to point to an objective methodology if community members ask why a particular site was (or wasn't) chosen.
- Finally, having help from a steering committee of stakeholders can lead to greater buy-in from the larger community. Projects are more successful when everyone's interests are aligned towards the same result.

\* Redevelopment is defined as all of the usual redevelopment goals intrinsic to Brownfields redevelopment but is also defined as simply being returned to a state of being before the land was contaminated.

## MEMORANDUM

TO : Hon. Andy Nez, Member  
Health, Education, and Human Services Committee  
25<sup>th</sup> Navajo Nation Council

FROM : Luralene D. Tapahe  
Luralene D. Tapahe, Principal Advocate  
Office of Legislative Counsel

DATE : July 2, 2024

RE : AN ACT RELATING TO THE LAW AND ORDER COMMITTEE, THE HEALTH, EDUCATION, AND HUMAN SERVICES COMMITTEE, THE RESOURCES AND DEVELOPMENT COMMITTEE, THE BUDGET AND FINANCE COMMITTEE, AND THE NAABIK'YATI' COMMITTEE, AND THE NAVAJO NATION COUNCIL; ESTABLISHING THE "NAVAJO NATION ENVIRONMENTAL REMEDIATION FUND" AND APPROVING A 2% ANNUAL SET-ASIDE FROM THE GENERAL FUND TO PAY FOR REMEDIATION ACTIVITIES AT CONTAMINATED SITES LOCATED ON THE NAVAJO NATION

---

Per your request, the Office of Legislative Counsel has prepared the above-described proposed legislation. OLC finds this draft to be legally sufficient, but as with any action of the Navajo Nation government, it can be challenged under applicable laws.

This legislation will be assigned to the appropriate Standing Committees of the Navajo Nation Council in accordance with the Speaker's authority under title 2 of the Navajo Nation Code.

Please review this legislation and its exhibits, to make sure that everything is satisfactory and in order. You should contact me immediately if any edits are needed, or if you have any questions or concerns. I can be reached at the Office of Legislative Counsel at (928) 871-7166 or via email at [luralenetapahe@navajo-nsn.gov](mailto:luralenetapahe@navajo-nsn.gov).

Dear Honorable Delegates of the 25th Navajo Nation Council,

I, Natanya Y. Garnenez, fully encourage the honorable Delegates of the 25 Navajo Nation Council to support approval of Legislation No. 0149-24 to establish a new Fund to pay for environmental remediation at the sites across the Navajo Nation, with an annual 2% set-aside from the General Fund.

I am a life-long resident and active community member of the Red Lake #18 Chapter. It is in our best interest to support this legislation to help clean-up the former Navajo Forest Products Industry (NFPI) contaminated site.

If you have any questions, please do not hesitate to contact me by email.  
Thank you,

Natanya Y. Garnenez  
Active Red Lake #18 Community Member

## Legislation 0149-24

**Prestene Garnenez**

Yesterday, 4:09 PM

Dear Honorable Navajo Nation Council:

I am writing today to support Legislation 0149-24 to establish the Navajo Nation Environmental Remediation Fund where there will be an annual 2% set-aside from the General Fund to pay and/or help pay for remediation activities at contaminated sites on the Navajo Nation. As you may know, all our communities across the Navajo Nation have some sort of contaminated site whether it be abandoned houses that were built with asbestos and lead materials, abandoned gas stations, abandoned stores, etc., or in our case, an abandoned sawmill, the former Navajo Forest Products Industry (NFPI), the first Navajo Nation business enterprise.

Our community has lived with the abandoned and un-remediated former NFPI sawmill site for 30 years! Over the last 30 years, we've seen remediation in fits and starts but ultimately, remediation and/or clean up of the NFPI site remains elusive because of lack of funds. Our community, working with Navajo Nation Environmental Protection Agency, and US EPA, has tried to access funding from the various funding sources available. But due to the complexity of the contamination and the length of time since abandoned which exacerbated the contamination further, the site remains largely unremediated. Federal funds have been accessed in the past and would be great to access again in the future as we believe that having a "match" fund could make a difference in our funding applications. We believe this Environmental Remediation Fund could be very helpful in leveraging more funds to help with assessments and environmental remediation efforts. We are not suggesting that this fund would replace efforts to apply for other external funds either, but rather to help with clean-up of the site.

It also stands to suggest that this fund could help many other Navajo Nation communities that have no other funding sources to address their contaminated site. Grant funding can typically go to a larger more populous community and not rural small towns where environmental impact seems minimal to a federal government agency.

Again, I hope you will support this legislation. Thank you.

Action Items

I, Philene Tyler am writing as a concern community member of Red Lake/Navajo, New Mexico. There was a time when Navajo, New Mexico was known for a successful lumber industry which was Navajo Forestry Product Industry (NFPI). The Navajo Nation was proud of their success until the plant was shut down. Since, the plant shut down, the town of Navajo, New Mexico was left with an eyesore. We're told there are dangerous chemicals left behind that are dangerous to our health, plants, wildlife, herbal plants, farm lands and even to communities downstream.

As our leaders of our Dine Nation, I ask you to please support **Legislation 0149-24**. Help us put our community back to a clean environment and safe and healthy community. We look forward to the day the site is cleaned and our children, grandchildren are not exposed to hazard environment.

Thank you,  
Philene Tyler  
Navajo, New Mexico

## RED LAKE CHAPTER #18

RLC-07-24-24

### RESOLUTION OF RED LAKE CHAPTER #18

**Supporting The Establishment Of A “Navajo Nation Environmental Remediation Fund” And**  
**Approving 2% Annual Set-Aside From The Navajo Nation General Fund To Pay For**  
**Remediation Activities At Contaminated Sites Located On The Navajo Nation**

WHEREAS:

1. Pursuant to the N.N.C., Section 3(A), the Red Lake Chapter #18 is a certified chapter of the Navajo Nation as listed under 11 NNC, Part I, Section 10; and
2. The Red Lake Chapter #18, a recognized certified local government of the Navajo Nation, vested with the power and authority to advocate on behalf of its constituents for the improvement of health, education, safety, and general welfare; and
3. Red Lake Chapter #18 provides multiple public services to the community, including services that directly affect the safety and health of the community; and
4. There are extensive surface water and groundwater contamination at several other former business and industrial sites across the Navajo Nation, which urgently need assessment and remediation for the protection of the public health, that of livestock, and that of sacred plants, herbs, and natural environment; and
5. The Navajo Forest Products Industry (NFPI) in Sawmill, AZ and Navajo, NM serves as two major examples of the many contaminated sites, which urgently need assessment and remediation for the protection of the public health, that of livestock, and that of sacred plants, herbs, and the natural environment; and
6. Such Fund will provide an ongoing source of funding for extensive and long-term remediation projects, and shows the Navajo Nation's firm commitment to protecting and preserving the natural environment for the long-term health and well-being of the Navajo People; and
7. Funds should be used for the purpose of paying for the activities of the Navajo Environmental Protection Agency ("NEPA"), or NEPA's contractors or agents, related to the assessment, cleanup, and remediation of former business and industrial sites located on the Navajo Nation that are contaminated with dangerous chemicals, materials, or substances, and that pose a danger to human health, public welfare, livestock, crops, groundwater, and the natural environment; and
8. No money from this Fund shall be used for assessment, cleanup, or remediation of any facility owned by the federal government or its instrumentalities, or by any state government or its instrumentalities. Notwithstanding, nothing in this Paragraph shall prevent the NEPA from taking

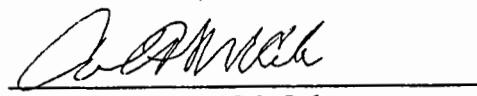

immediate corrective action at a facility where there is no solvent owner or operator or where immediate action is necessary to respond to an imminent and substantial threat to human health, livestock, groundwater, or the environment even if it is owned by the federal or state government.

**NOW THEREFORE BE IT RESOLVED THAT:**

1. The Red Lake Chapter hereby supports the establishment of a "Navajo Nation Environmental Remediation Fund" and approving 2% annual set-aside from the general fund to pay for remediation activities at contaminated sites located on the Navajo Nation

**C E R T I F I C A T I O N**

We, hereby certify that the foregoing resolution was duly considered by the Red Lake Chapter at a duly called meeting in Navajo, New Mexico (Navajo Nation) at which a quorum was present and that same was passed by a vote of 28 in favor -0- opposed and 01 abstained this 28th day of July, 2024.
